Maximum Angular spreads vs. Scopes

	Init.(E) μrad(GeV)	Mod.(E) μrad(GeV)	Full(E) μrad(GeV)	Worst (E) μrad(GeV)	Case
ang x	178 (140)	178(140)	215(106)	215(105)	Full Scope HD
ang y	220(105)	220(105)	202(45)	220(105)	Moderate Scope HD

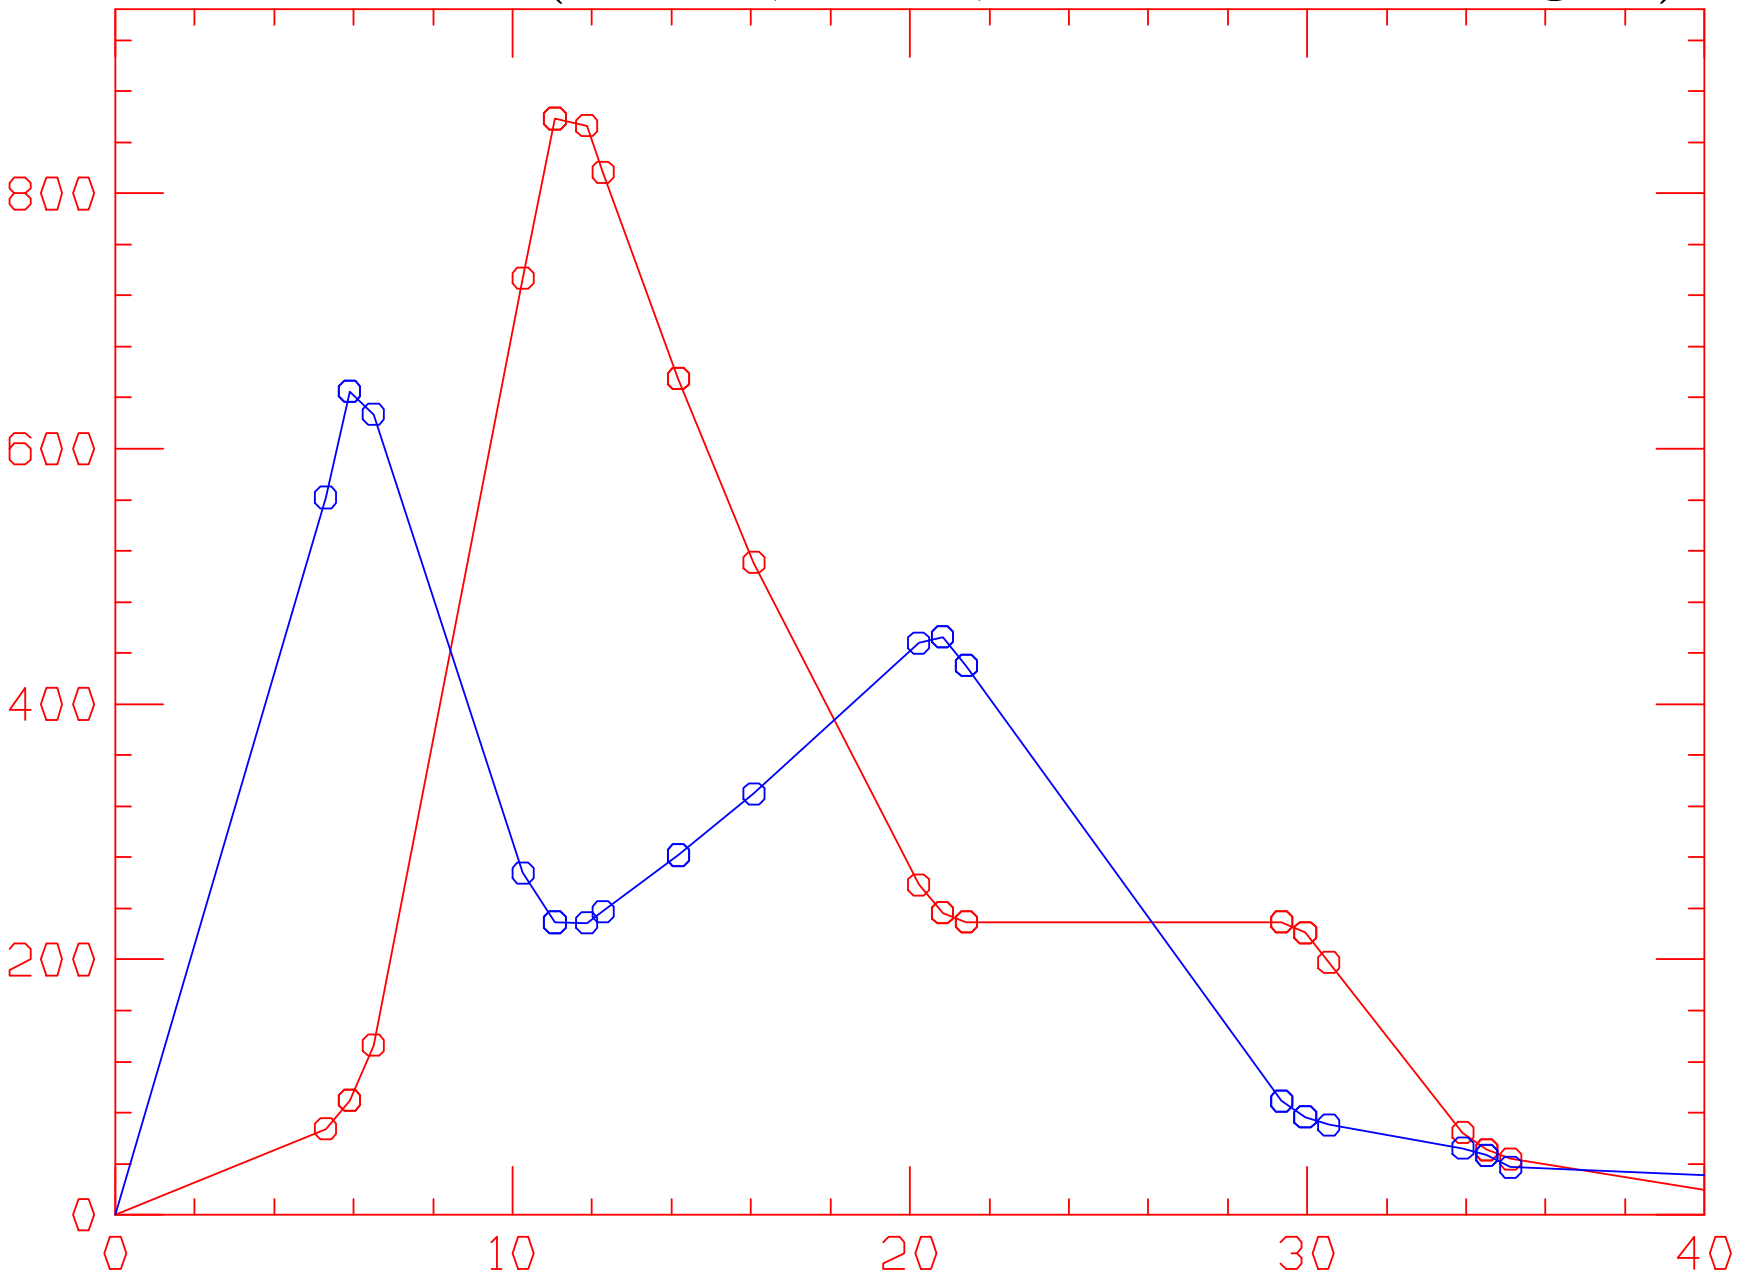
- The maximum x electron divergence = 215 μrad (close to the allowed of 220 μrad) It is for E (c of m)=105 GeV for the Full Scope, with β*=43 cm, ϵ=20 nm
- The maximum y electron divergence = 220 μrad (equal to the allowed of 220 μrad) It is for E (c of m)=105 GeV for the Moderate Scope, with β*=10.2 cm and ϵ=4.9 nm)
- Steve, used β_x^*=42 cm, which with ϵ=19.7 nm gives 215 μrad and β_y^*=5 cm which with ϵ=1.7 nm gives 220 μrad

Note that by using geometric emittances, these parameters are independent of the beam energies

Betas and beam sizes vs. length

- I note that Steve's v6 simulations use Q0eF strength and locations and Q2eF locations that are identcal to mine.
- I use Steve's MAD output to get betas in x
- These are very close to mine.
- I use an emittance of 20 e-9 (near enough to 19.7) to calculate beam sizes for two cases:
  1. 15 sigma and
  2. 12.5 sigma (used to find synchrotron fans assuming 12.5 sigma collimation elsewhere in the ring

Steve's betas (at start, center, and end of each magnet)



1) 15 sigma parameters

```
emitx =  2E-08   sigs =  15

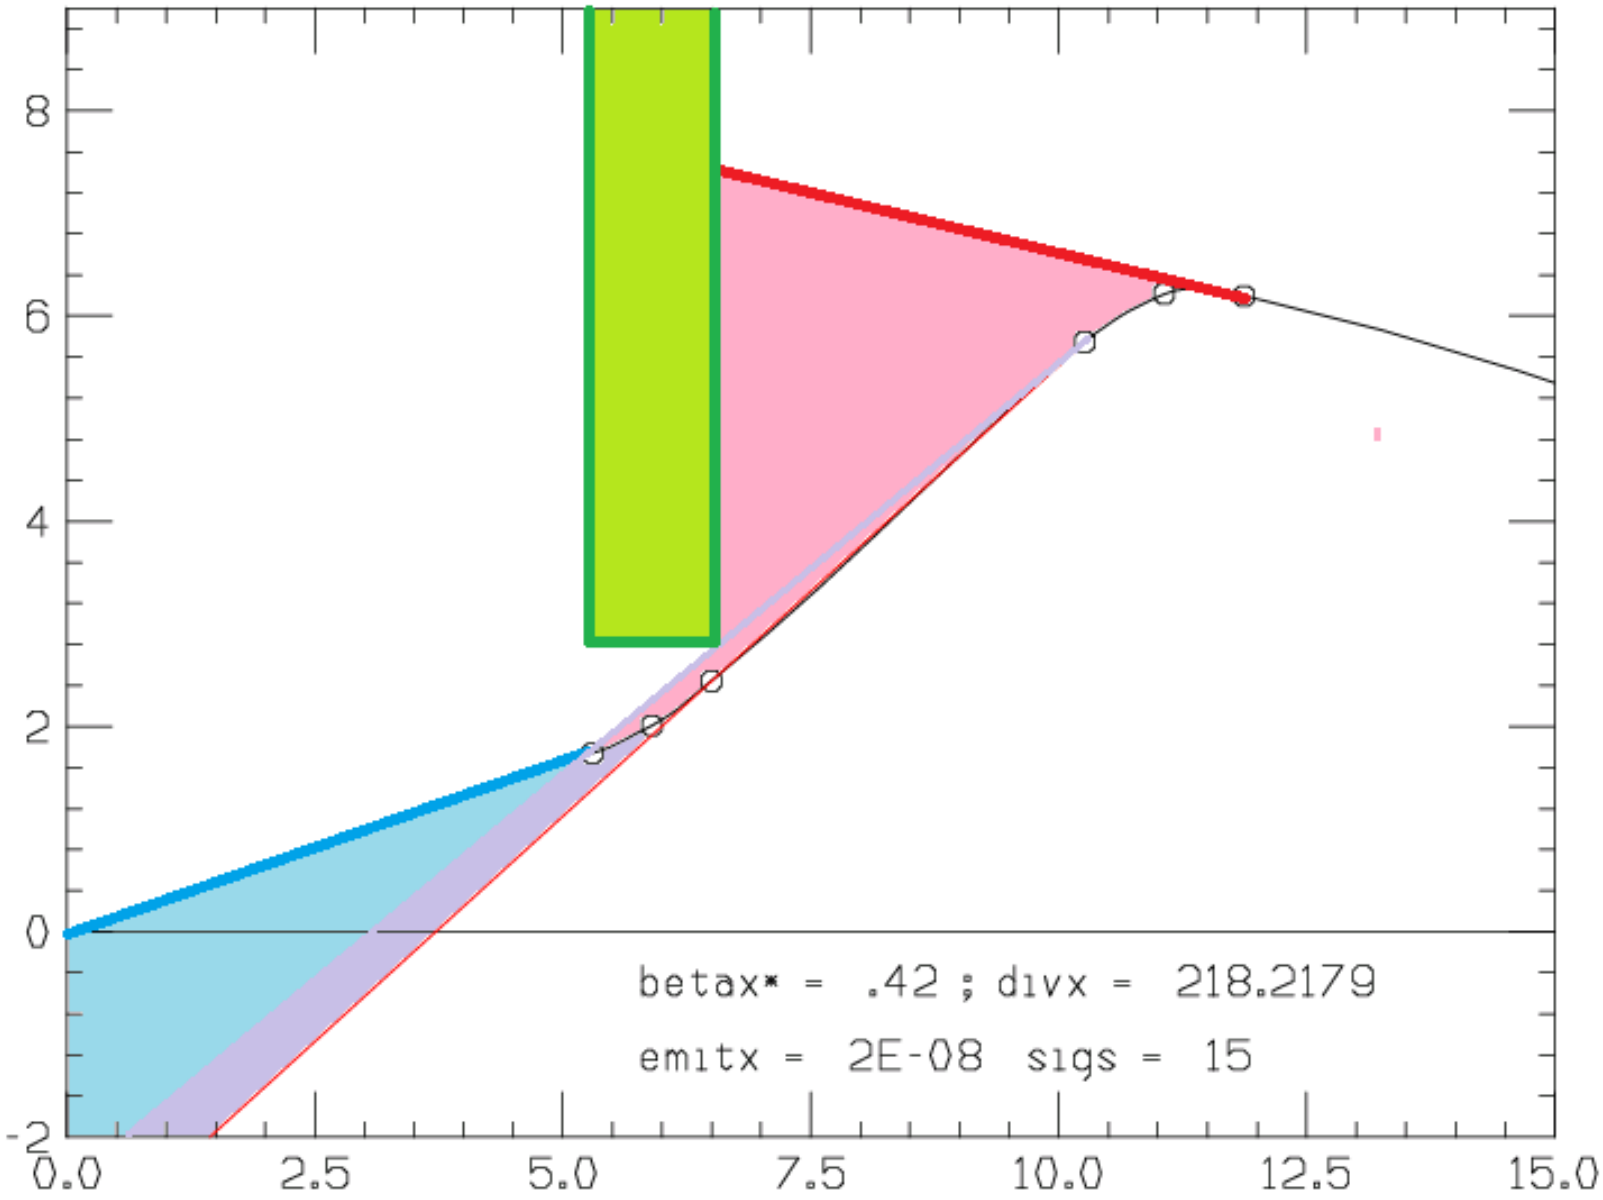
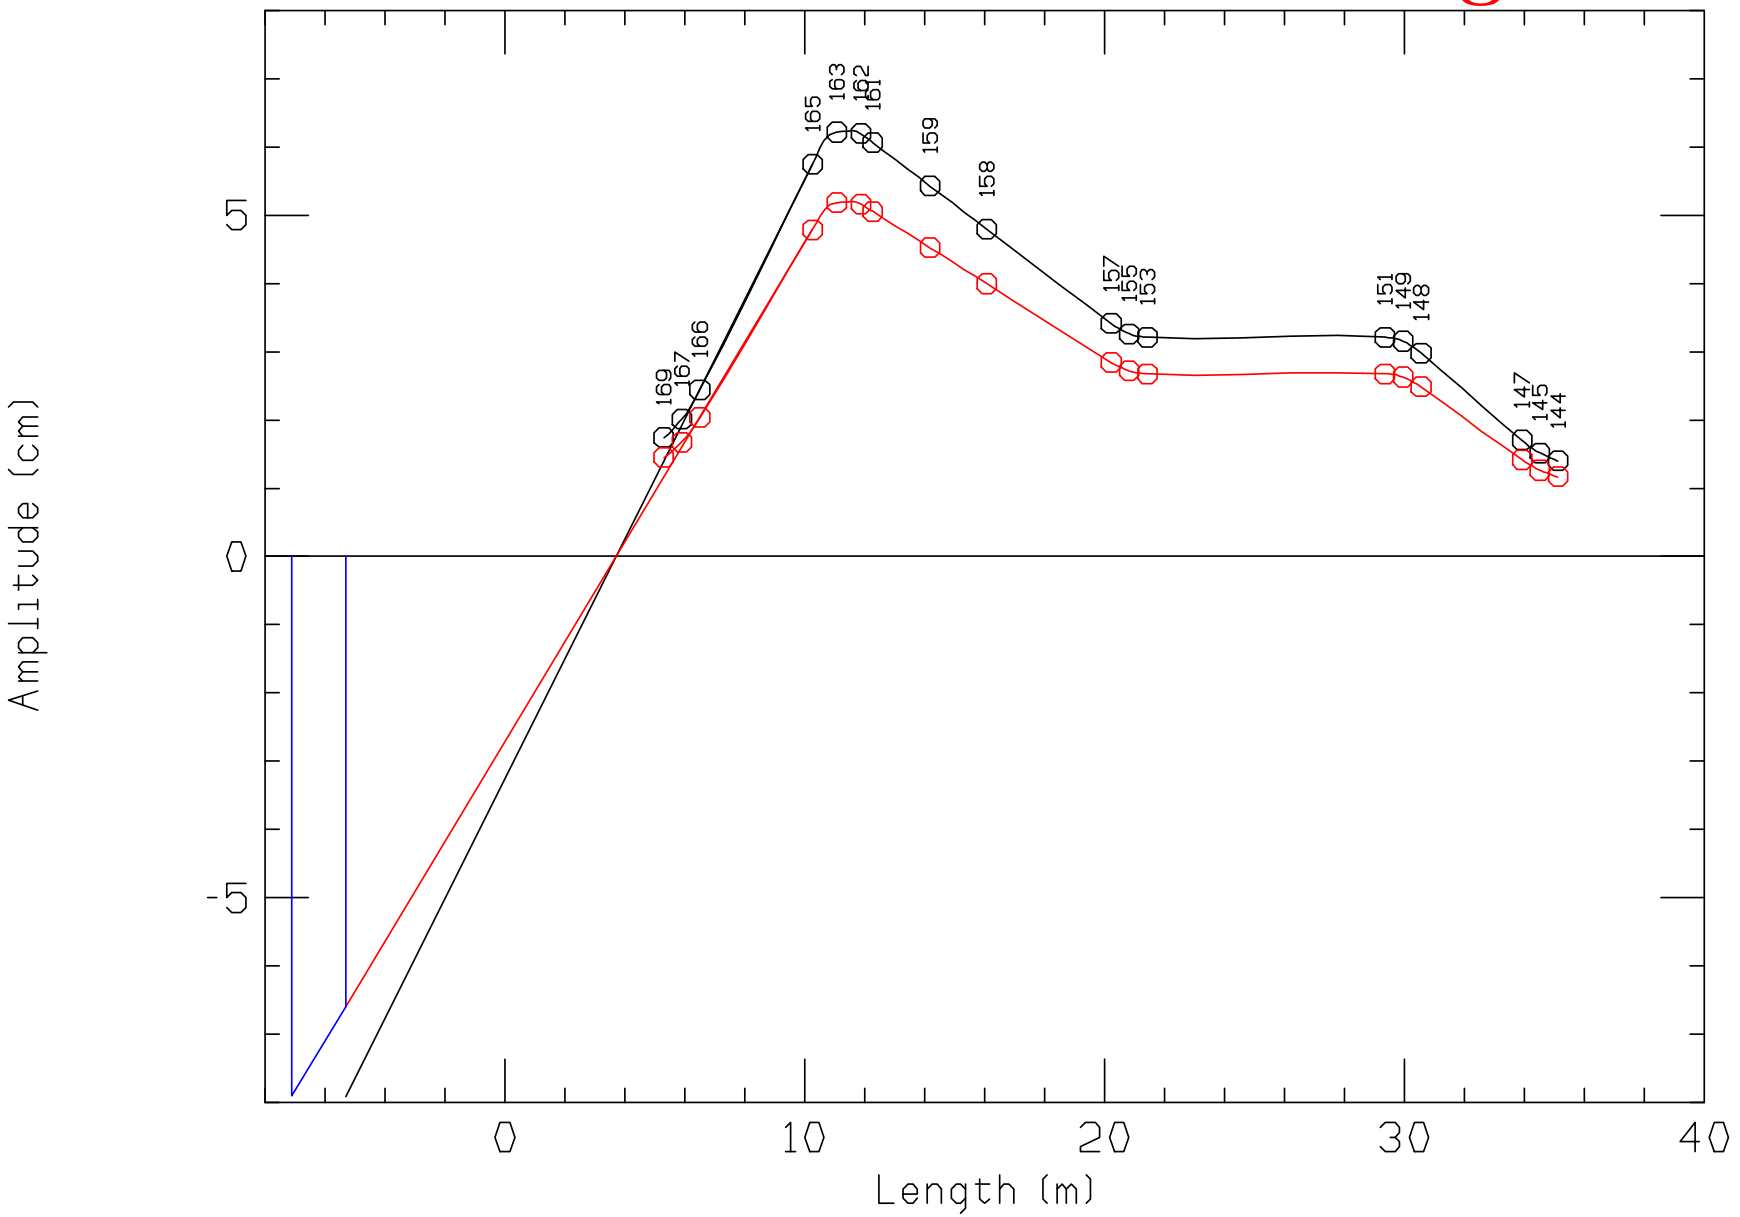
Fans from Q0eF and Q2eF



Beam size and fans for 15 and 12.5 sigma



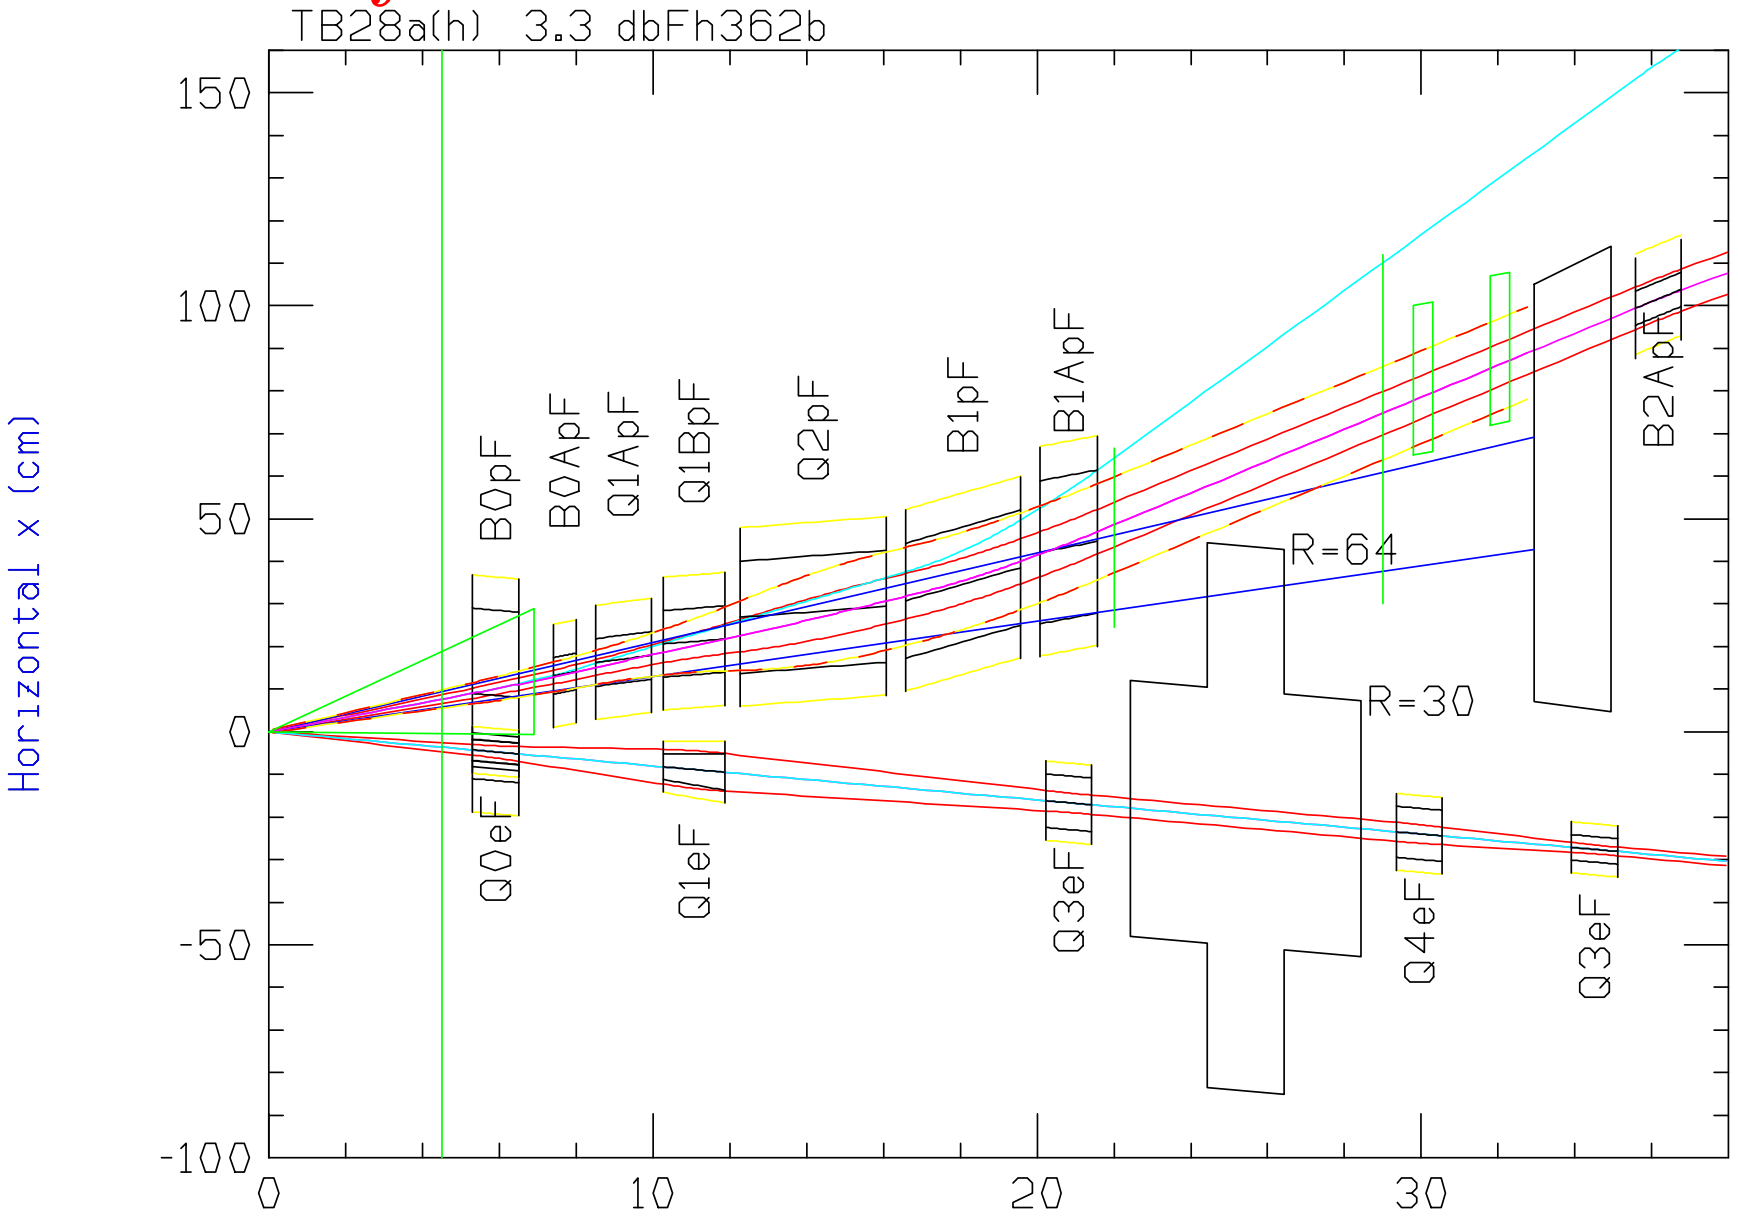
Conclusion on SR

- In Steve's MAD simulation The location and strength of Q0eF is the same as in mine
- Using his betas I calculate beam apertures at
  1)15 sigma and
  2) 12.5 sigma
- I use the divergence between Q0eF and Q2eF to define the SR fan
- The results agree with my earlier simulations showing that the apertures of the rear Q1eR and Q2eR match the fan for 12.5 sigmas.

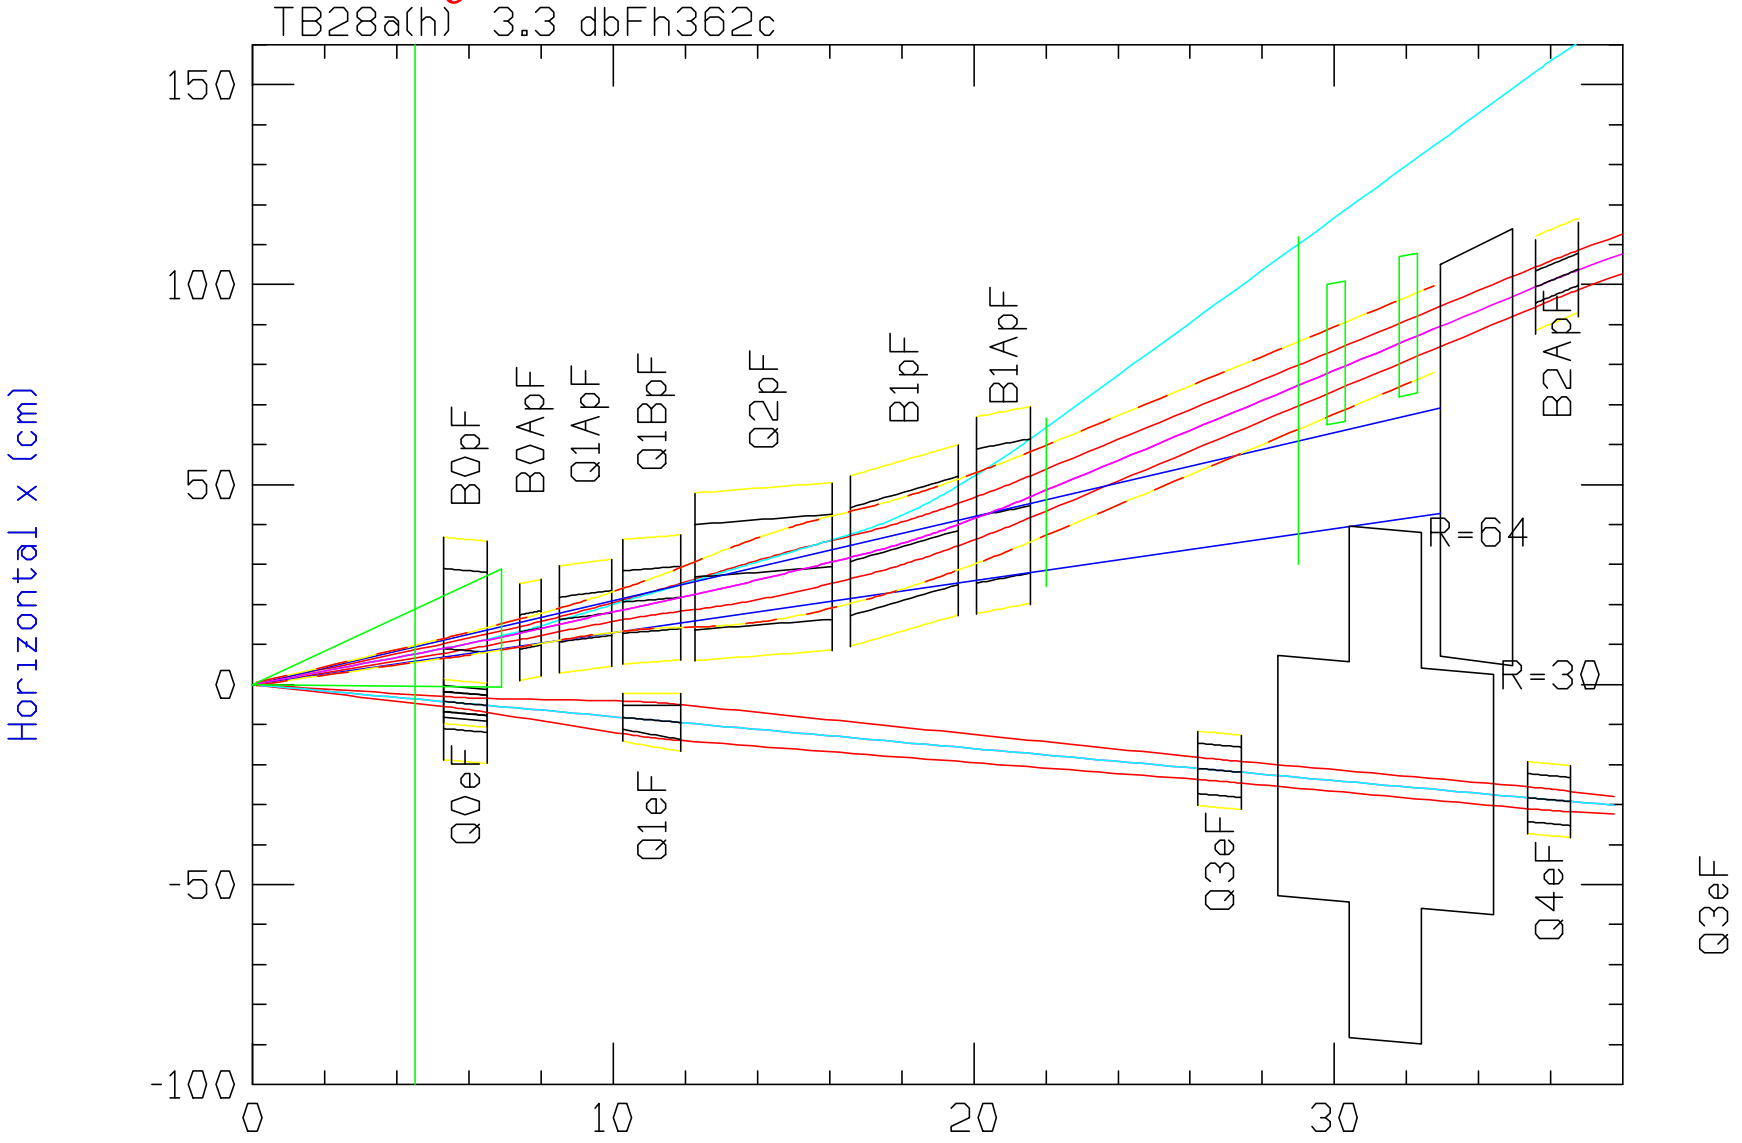
Location for Forward e crab

- With Steve's version 6 there is:
  1. a severe conflict with a 200 MHz crab (R$\approx$ 85 cm)
  2. a finite conflict with a 400 MHz crab (R$\approx$ 64 cm)
- With suggested changes:
  1. a finite conflict with a 200 MHz crab (R$\approx$ 85 cm)
  2. but no conflict with a 400 MHz crab (R$\approx$ 64 cm)

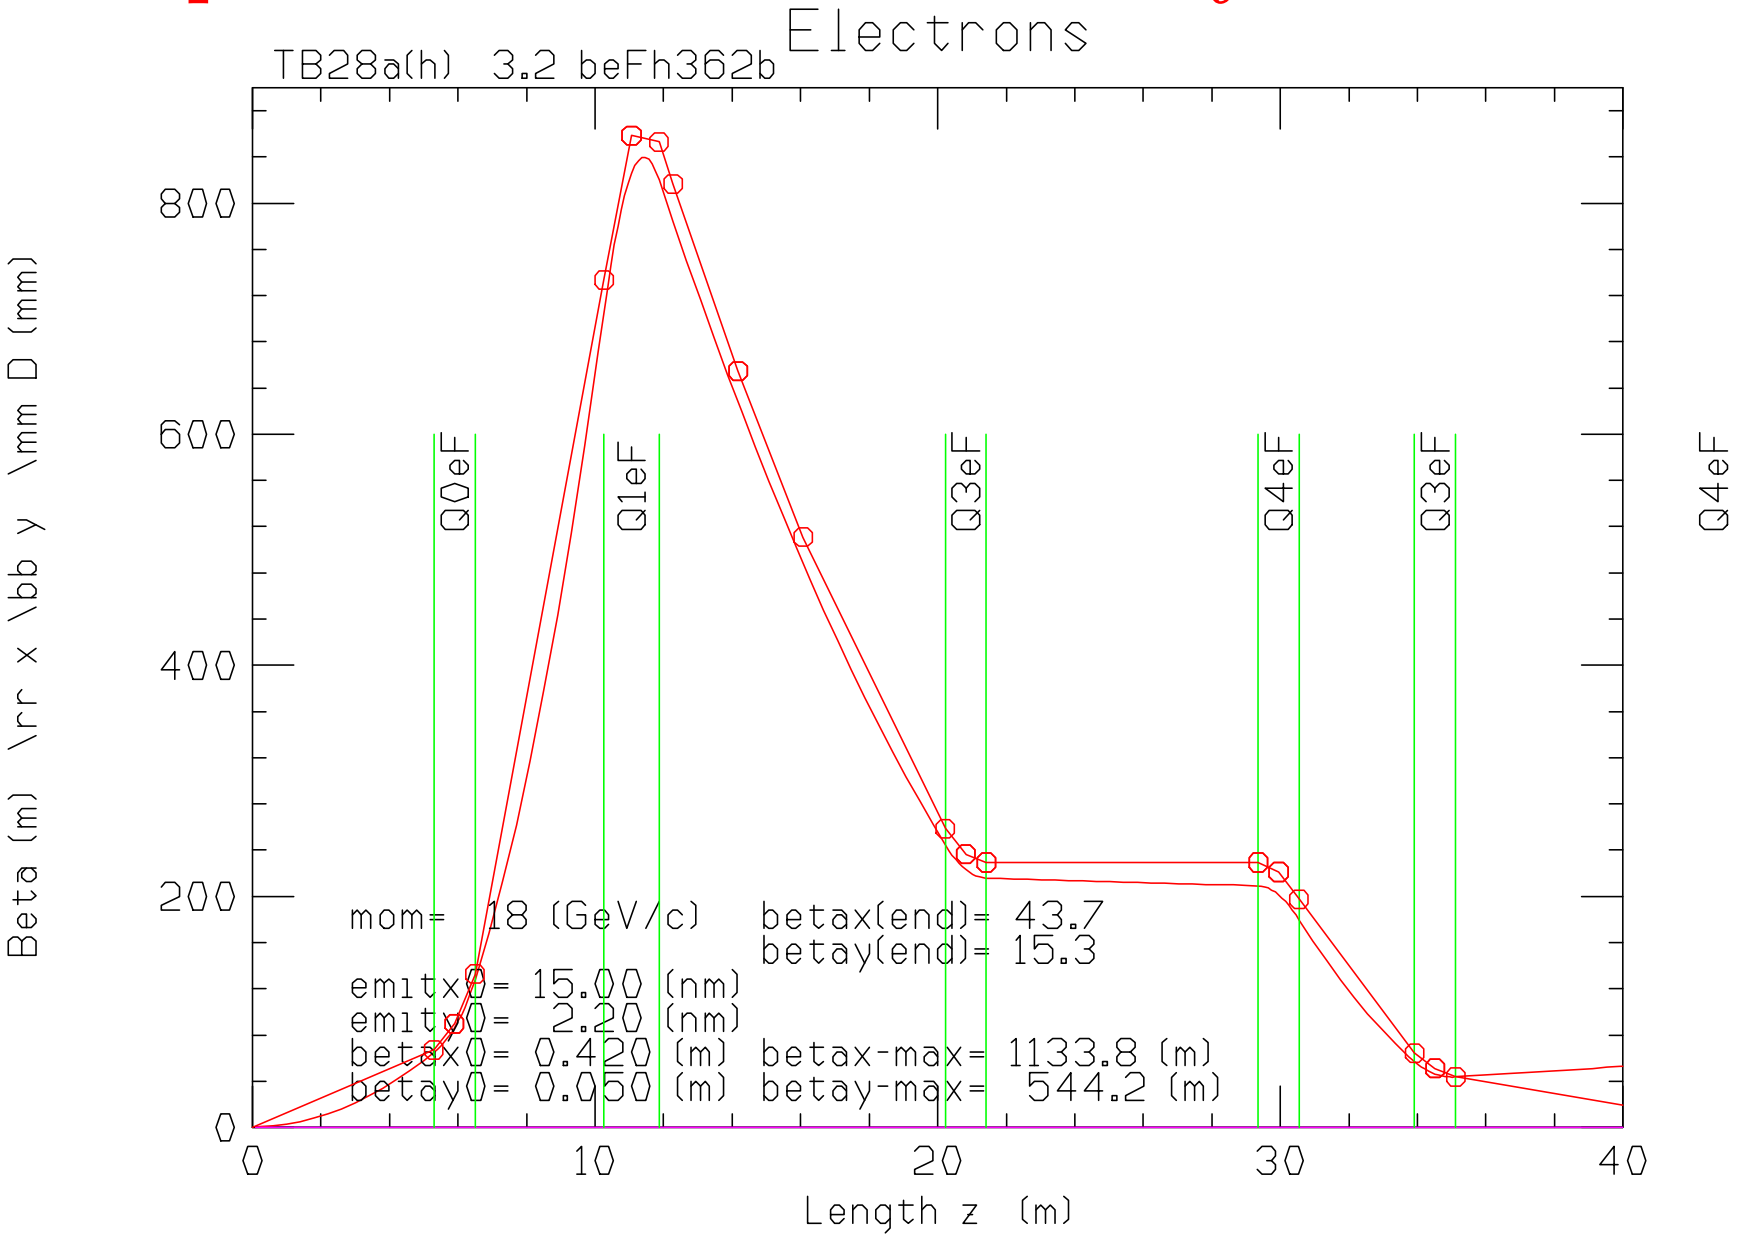
Sreve's layout with 400 MHz



Modified layout with 400 MHz



Compare Steve's MAD with my unmodified



Sreve's and modified betas
