

# Track Cut Study: Update

sPHENIX Tracking Meeting

February 1<sup>st</sup>, 2023

Derek Anderson

# Ratio of Weird/Normal Tracks to All

- Ratio of weird/normal (primary) tracks to all (primary) tracks as a function of quality
- **Reminder:**
  - Weird  $\Rightarrow p_T^{reco} / p_T^{true} \notin (0.2, 1.20)$
  - Normal  $\Rightarrow p_T^{reco} / p_T^{true} \in (0.2, 1.20)$

Previous Slides

# Details

- **Weird Tracks:** tracks with  $p_T^{trk} / p_T^{true} \notin (0.2, 1.2)$ 
  - Split weird track population into 2 samples:
    - › W/o Silicon Seeds: **nmaps == 0**
    - › W/ Silicon Seeds: **nmaps == 3**
- **Normal Tracks:** tracks with  $p_T^{trk} / p_T^{true} \in (0.2, 1.2)$
- Color scheme:
  - **Black triangles** = primary tracks
  - **Magenta triangles** = truth
  - **Red X's** = weird primary tracks
  - **Blue circles** = normal primary tracks
- In 2D plots:
  - **Color maps** = all primary tracks
  - **Red X scatter plots** = weird primary tracks
  - **Blue circle scatter plots** = normal primary tracks

- Simulated sample of single  $\pi^-$ 
  - 20  $\pi^-$  per event
  - $p_T^{true} \in (0, 20)$  GeV/c
  - Ran w/ scan\_for\_embed on
- Using larger sample than in previous updates:
  - No. of primary tracks: **244015**
  - No. of weird tracks: **4175**
    - › No. w/o silicon seeds: **3582**
    - › No. w/ silicon seeds: **578**
    - › **15** weird tracks had nmaps == 4
  - No. of normal tracks: **239840**
- Cuts Applied:
  - **gprimary == 1** (select only primary tracks)
  - Cuts to select weird & normal tracks

# Some Observations

## Weird Tracks w/o Silicon Seeds

- $p_T^{trk}$  distribution is bimodal (slide 4)
- Majority seem to lie at sector boundaries in phi (slide 5)
- Majority have large DCAxy values (slides 6 and 7)
  - › Show no correlation in DCAz (slides 8 and 9)
- $\chi^2/ndf$  distribution is falling (slide 10)

## Weird Tracks w/ Silicon Seeds

- $p_T^{trk}$  distribution is unimodal (slide 4)
- No correlation in phi (slide 5)
- $\chi^2/ndf$  distribution is roughly flat (slide 10)

## All Weird Tracks

## Weird Tracks w/o Silicon Seeds

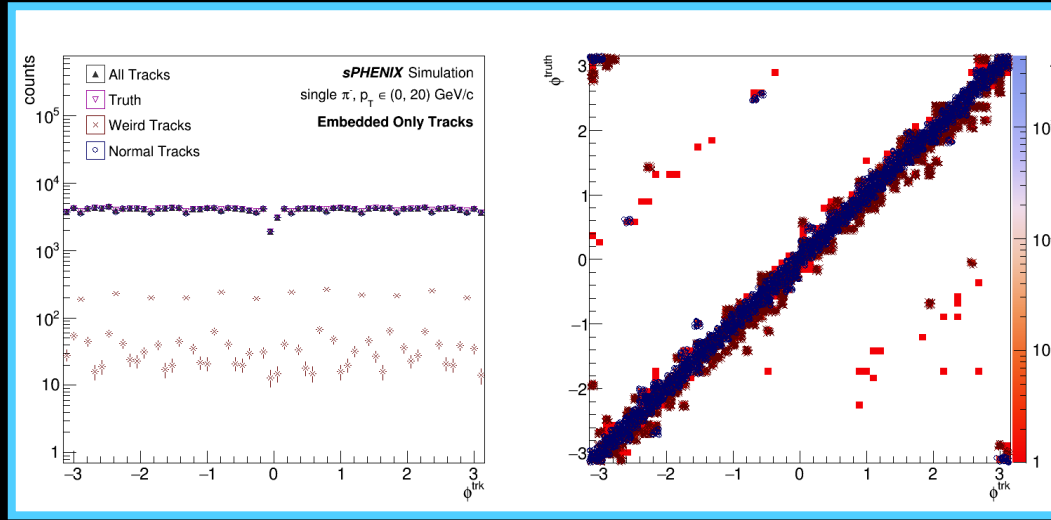

## Weird Tracks w/ Silicon Seeds

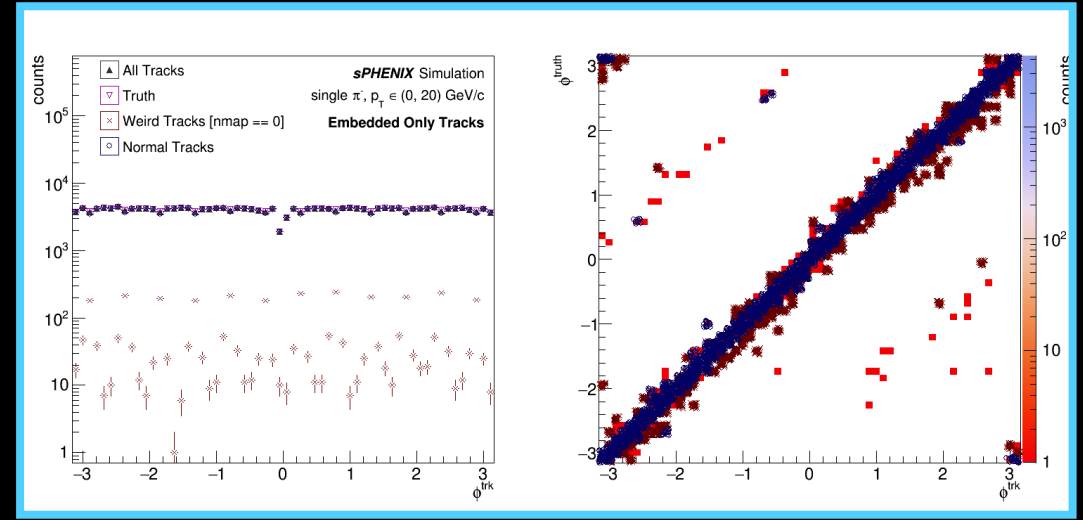

- Reconstructed and truth  $p_T$ 
  - reco.  $p_T$  (left panels)
  - reco. vs. truth  $p_T$  (right panels)
  - **pt vs. gpt** leaves of ntp\_track tuple
- **Note:** y-axes are **not** scaled
  - y-axis range changes between plots (apologies!)

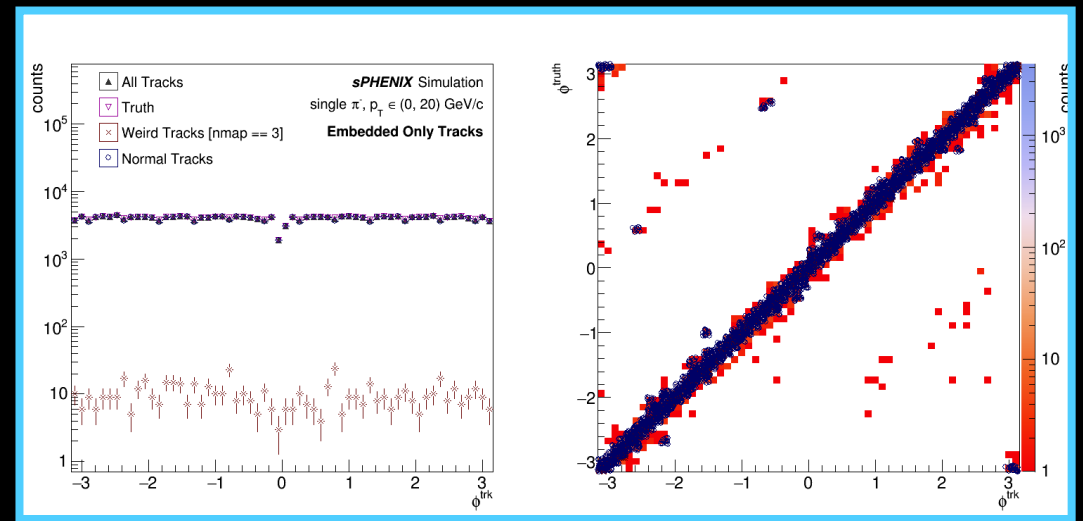

## All Weird Tracks

## Weird Tracks w/o Silicon Seeds

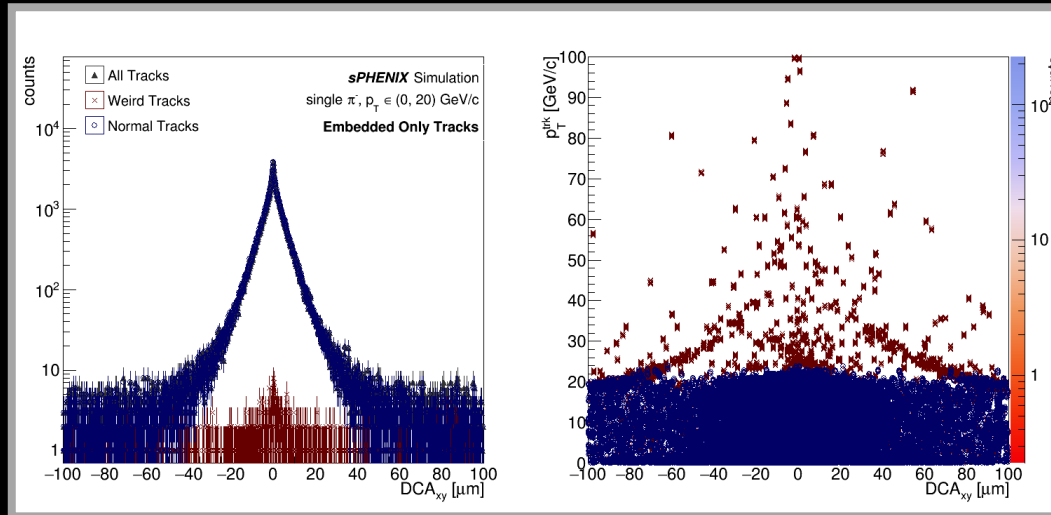

## Weird Tracks w/ Silicon Seeds

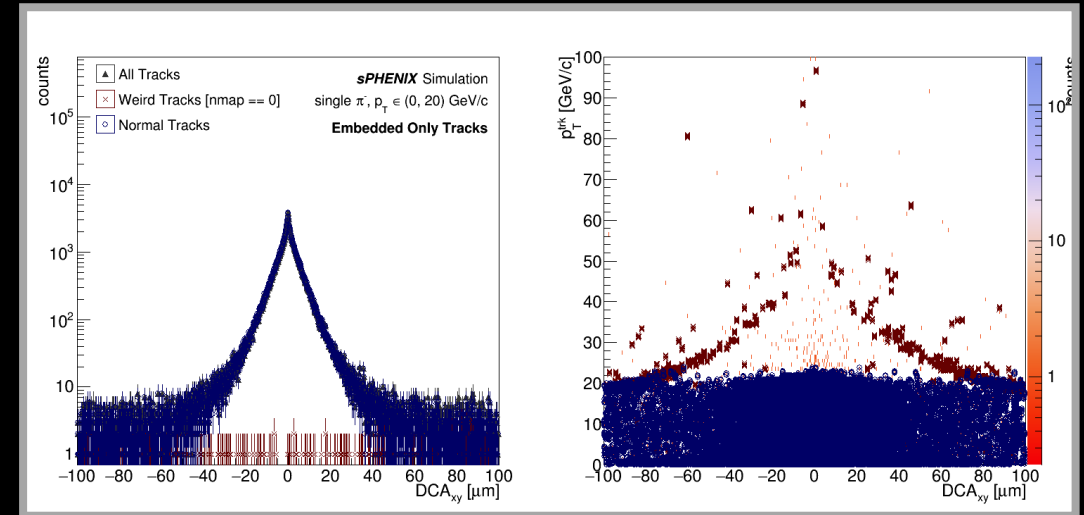

- Reconstructed and truth phi
  - reco. phi (left panels)
  - reco. vs. truth phi (right panels)
  - **phi vs. gphi** leaves of ntp\_track tuple
- **Note:** y-axes are **not** scaled
  - y-axis range changes between plots (apologies!)

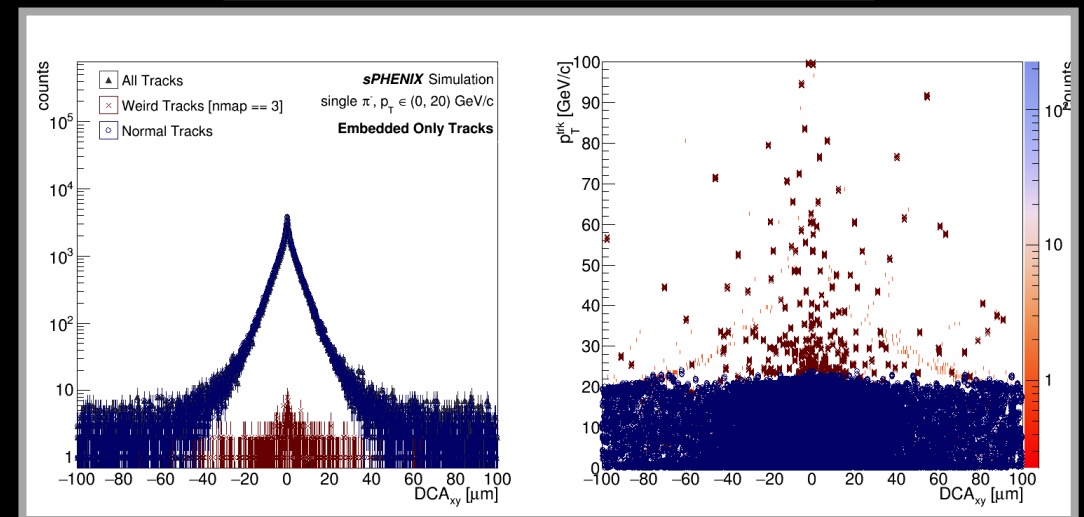

## All Weird Tracks

## Weird Tracks w/o Silicon Seeds

## Weird Tracks w/ Silicon Seeds

- Track DCAxy
  - Track DCAxy (left panels)
  - DCAxy vs.  $p_T^{trk}$  (right panels)
  - `dca3dxy` vs. `pt` leaves of `ntp_track` tuple
- Note: y-axes are not scaled
  - y-axis range changes between plots (apologies!)

# Weird Track DCAxy

All Weird Tracks

Weird Tracks w/o Silicon Seeds

Weird Tracks w/ Silicon Seeds

- Weird track  $\text{DCA}_{xy}$ 
  - `dca3dxy` leaf of `ntp_track` tuple for only weird tracks

- **Note:** z-axes are not scaled
  - z-axis range changes between plots (apologies!)

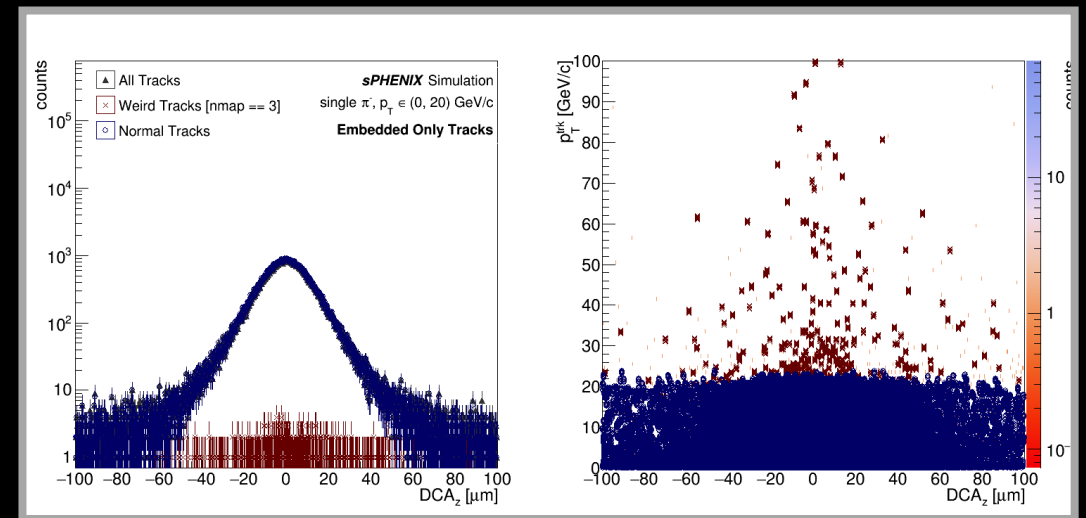

## All Weird Tracks

## Weird Tracks w/o Silicon Seeds

## Weird Tracks w/ Silicon Seeds

- Track DCAz
  - Track DCAz (left panels)
  - DCAz vs.  $p_T^{trk}$  (right panels)
  - `dca3dz` vs. `pt` leaves of `ntp_track` tuple
- Note: y-axes are not scaled
  - y-axis range changes between plots (apologies!)

# Weird Track DCAz

All Weird Tracks

Weird Tracks w/o Silicon Seeds

Weird Tracks w/ Silicon Seeds

- Weird track  $\text{DCA}_z$ 
  - `dca3dz` leaf of `ntp_track` tuple for only weird tracks

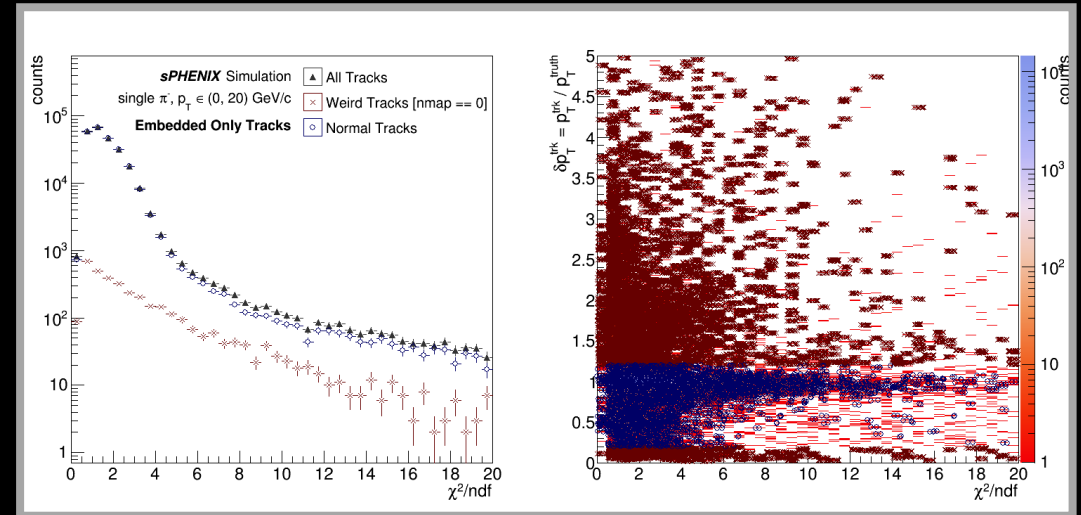

- Note: z-axes are not scaled
  - z-axis range changes between plots (apologies!)

# Track Quality

## All Weird Tracks

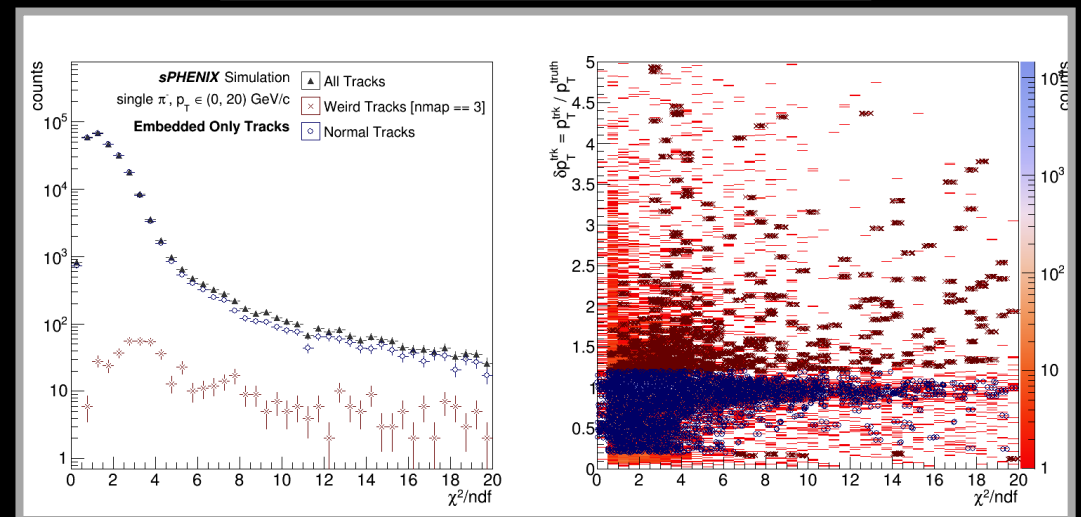

## Weird Tracks w/o Silicon Seeds

- Track  $\chi^2/\text{ndf}$ 
  - Track  $\chi^2/\text{ndf}$  (left panels)
  - $\chi^2/\text{ndf}$  vs.  $p_T^{\text{trk}}/p_T^{\text{true}}$  (right panels)
  - quality vs. pt/gpt leaves of ntp\_track tuple

- Note: y-axes are not scaled
  - y-axis range changes between plots (apologies!)

## Weird Tracks w/ Silicon Seeds

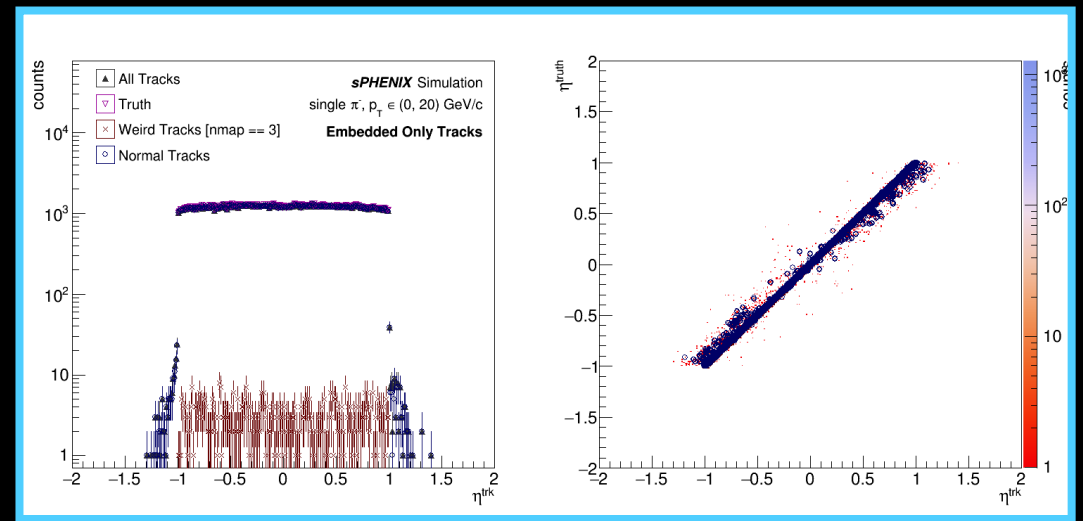

## All Weird Tracks

## Weird Tracks w/o Silicon Seeds

## Weird Tracks w/ Silicon Seeds

- Reconstructed and truth eta
  - reco. eta (left panels)
  - reco. vs. truth eta (right panels)
  - eta vs. geta leaves of ntp\_track tuple
- **Note:** y-axes are not scaled
  - y-axis range changes between plots (apologies!)

# Track X-Vertex

All Weird Tracks

Weird Tracks w/o Silicon Seeds

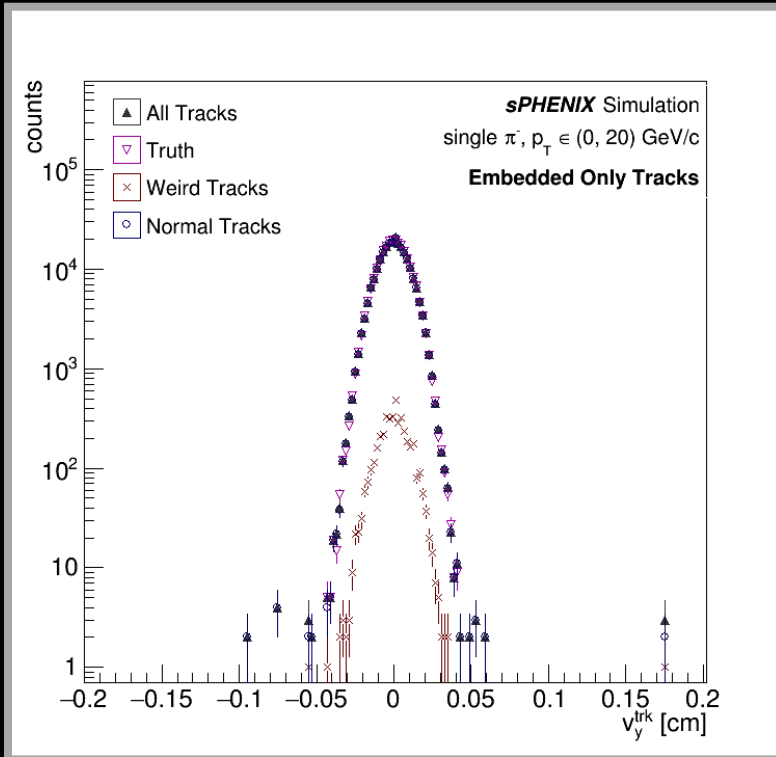

Weird Tracks w/ Silicon Seeds

- X-component of reconstructed vertex
  - $v_x$  leaf of `ntp_track` tuple

- **Note:** y-axes are **not** scaled
  - y-axis range changes between plots (apologies!)

# Track Y-Vertex

All Weird Tracks

Weird Tracks w/o Silicon Seeds

Weird Tracks w/ Silicon Seeds

- Y-component of reconstructed vertex
  - $v_y$  leaf of `ntp_track` tuple

- **Note:** y-axes are **not** scaled
  - y-axis range changes between plots (apologies!)

# Workfest Follow-Up | Reco. vs. Truth $v_x$

- Only cuts applied are to select “weird tracks”  
 $\Rightarrow p_T^{reco} / p_T^{truth} \notin (0.2, 1.2)$

- **Note:** distributions scaled by integral

# Workfest Follow-Up | Reco. vs. Truth $v_y$

- Only cuts applied are to select “weird tracks”  
 $\Rightarrow p_T^{reco} / p_T^{truth} \notin (0.2, 1.2)$

- **Note:** distributions scaled by integral

# Workfest Follow-Up | Reco. vs. Truth $v_z$

- Only cuts applied are to select “weird tracks”  
 $\Rightarrow p_T^{\text{reco}} / p_T^{\text{truth}} \notin (0.2, 1.2)$

- **Note:** distributions scaled by integral

# Workfest Follow-Up | Difference Between Reco. vs. Truth Vtx

- Only cuts applied are to select “weird tracks”  
 $\Rightarrow p_T^{\text{reco}} / p_T^{\text{truth}} \notin (0.2, 1.2)$

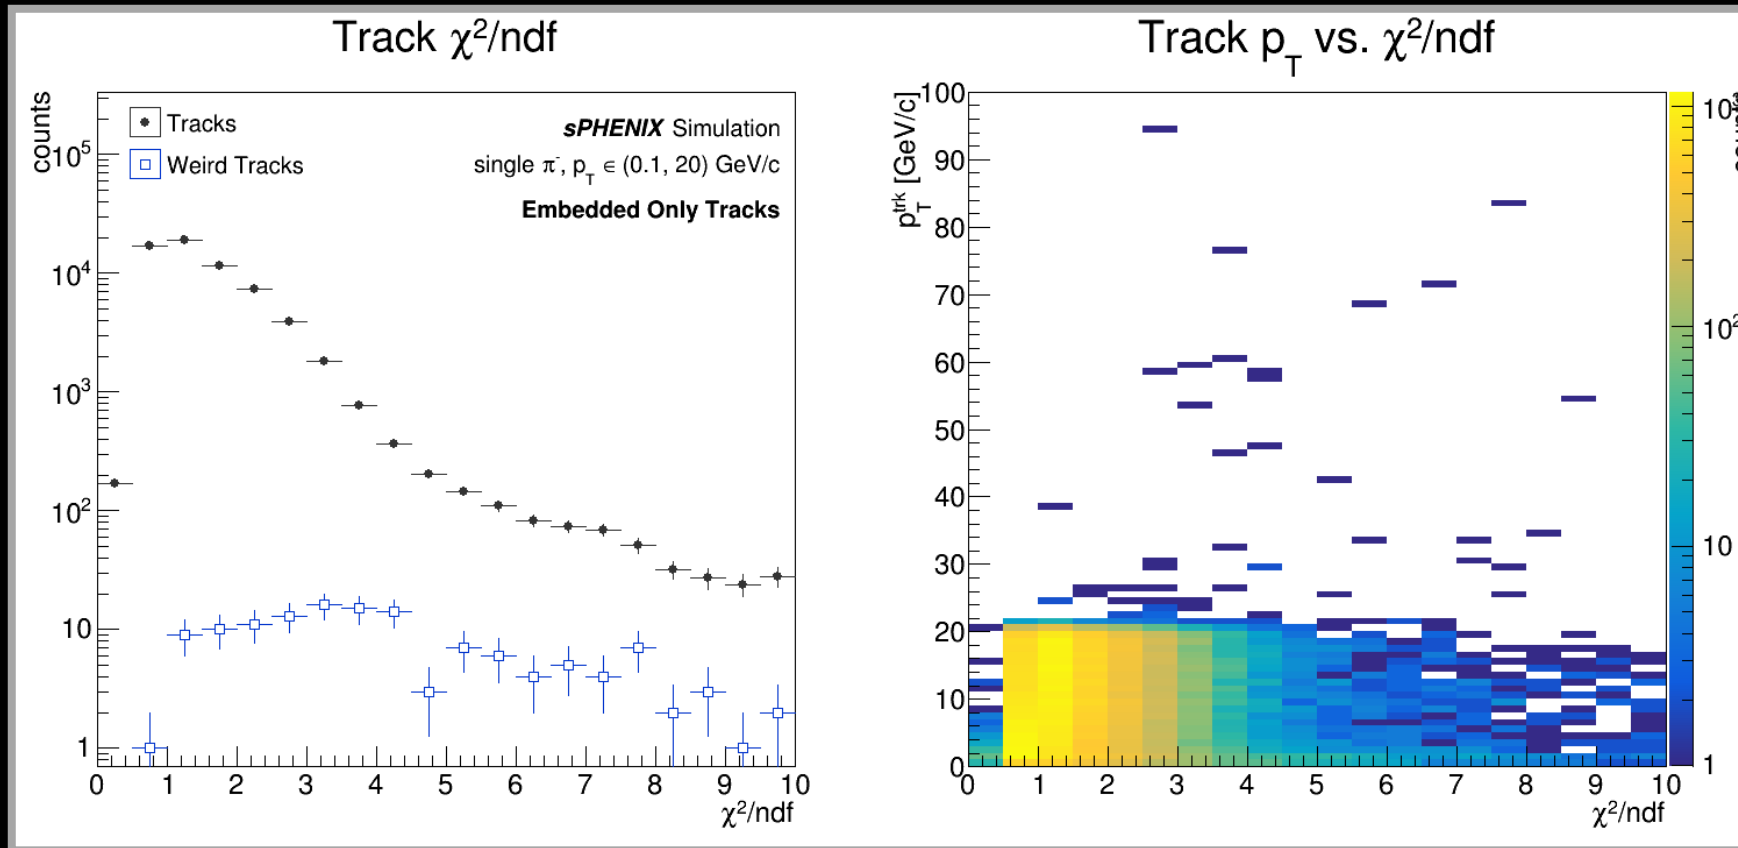

- **Note:** distributions scaled by integral

# What Did I do?

- **Task:** characterize outlier tracks
  - **Result:** Made progress and have a lead (see next slide)...
- **Note:** Also would like to determine cuts to remove pileup tracks
  - Made progress along this front as well:
    - 👍 Figured out how to embed in hijing: now successfully running jobs
    - 👍 Made necessary edits to code to characterize pileup tracks

# A Possible Lead

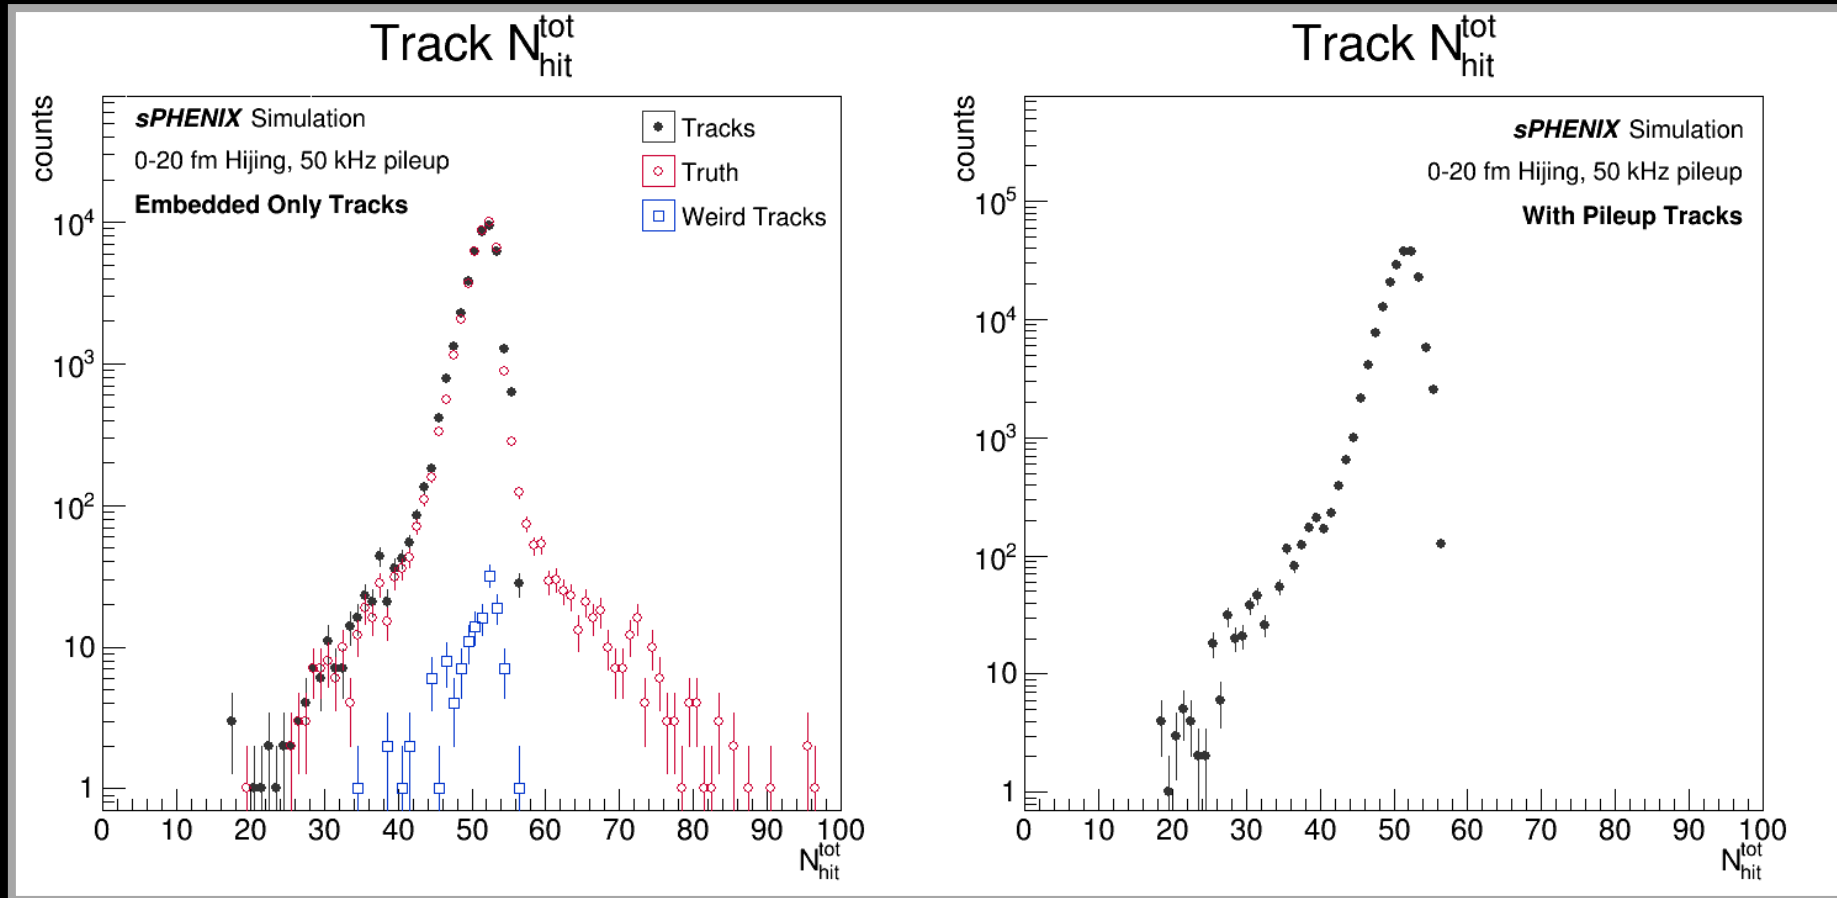

- Outlier tracks generally look similar to normal tracks...
  - ☞ **Except:** The chi2/ndf of the track fit...
  - ☞ Will be following up at tracking meeting at on Tuesday

# Update Details

- Currently running over larger sample
  - 0 – 20 fm Hijing (**type = 4**)
  - 50 kHz pileup (**pileup = 1**)
  - ☞ **41700 embedded tracks shown here** (12868 last time)
- **Pileup tracks included this time:**
  - Plotted all entries from ntp\_gtrk (excluded NAN entries)
  - ☞ **Should I be looking at only entries with gprimary = 0?**

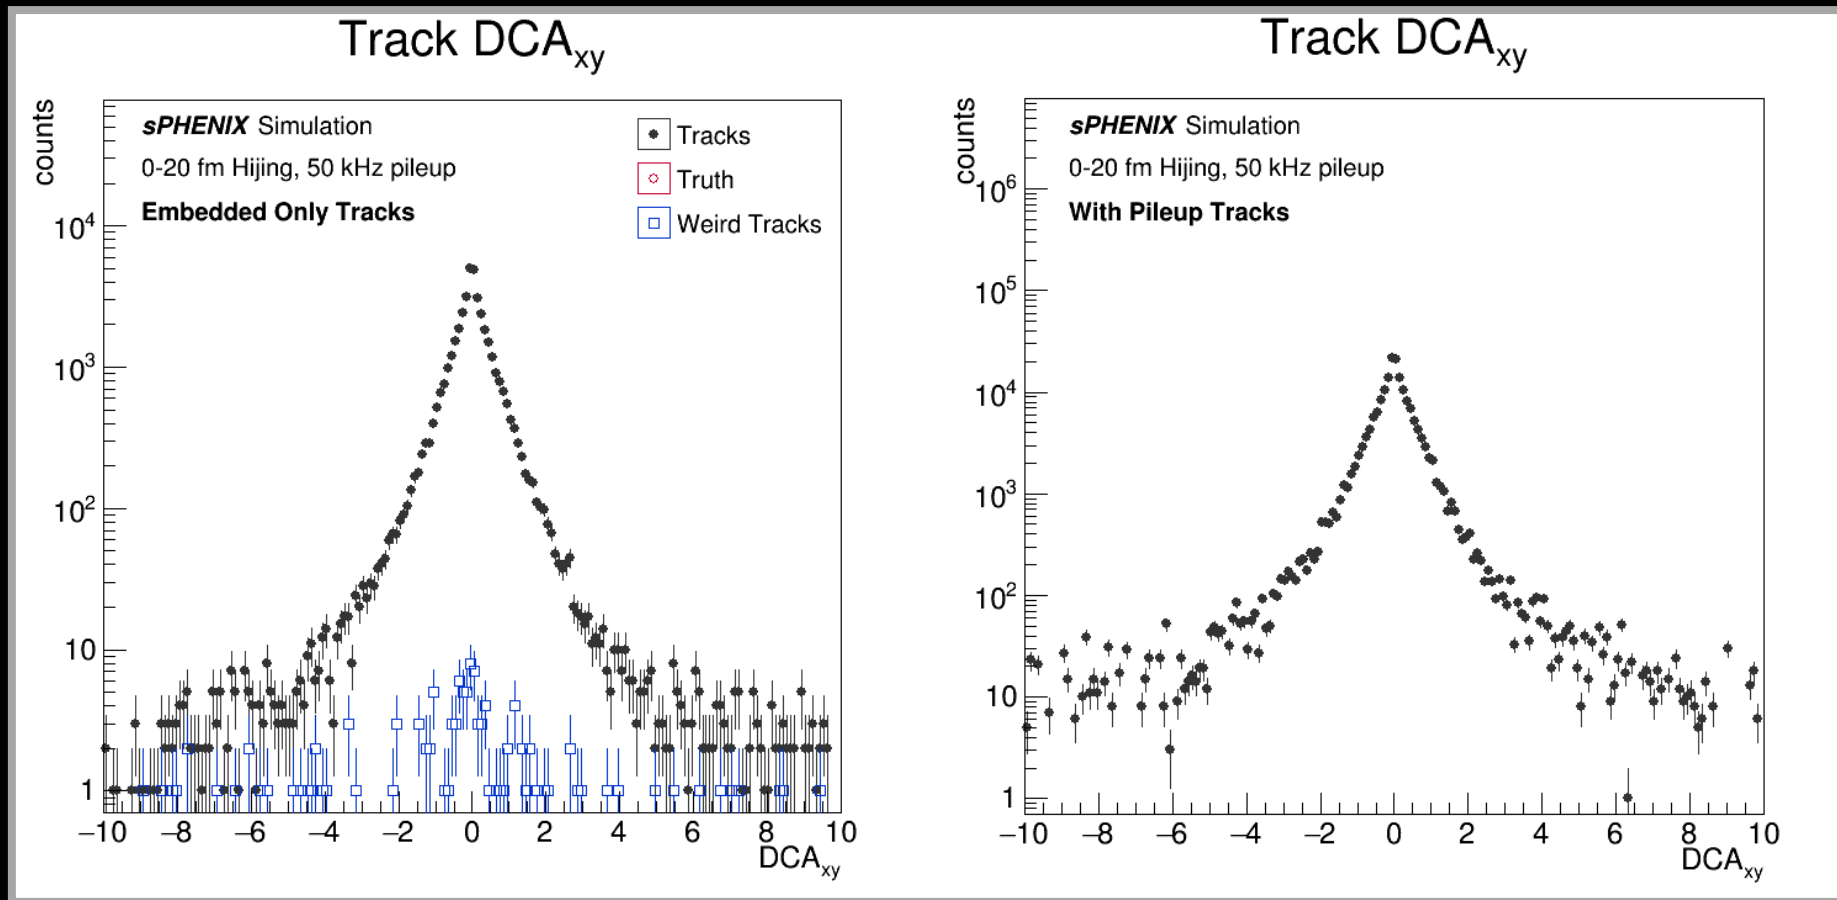

- **Plots shown here:**
  - Nhits, DCAxy, DCAz,  $\eta$ ,  $\phi$ , and  $p_T$  for reco., truth, “weird”, and pileup tracks
  - The %-errors on DCAxy, DCAz,  $\eta$ ,  $\phi$ , and  $p_T$
- **“Weird Tracks:”** tracks w/ unusually large or small  $p_T^{trk} / p_T^{true}$ 
  - ☞ **< 0.2 or > 1.2**

# Embed Only vs. With Pileup | Track NHits

- **Note:** y-axis scale changes b/n left and right
  - Will fix next time..

# Embed Only vs. With Pileup | Track DCA<sub>xy</sub>

- **Note:** y-axis scale changes b/n left and right
  - Will fix next time..

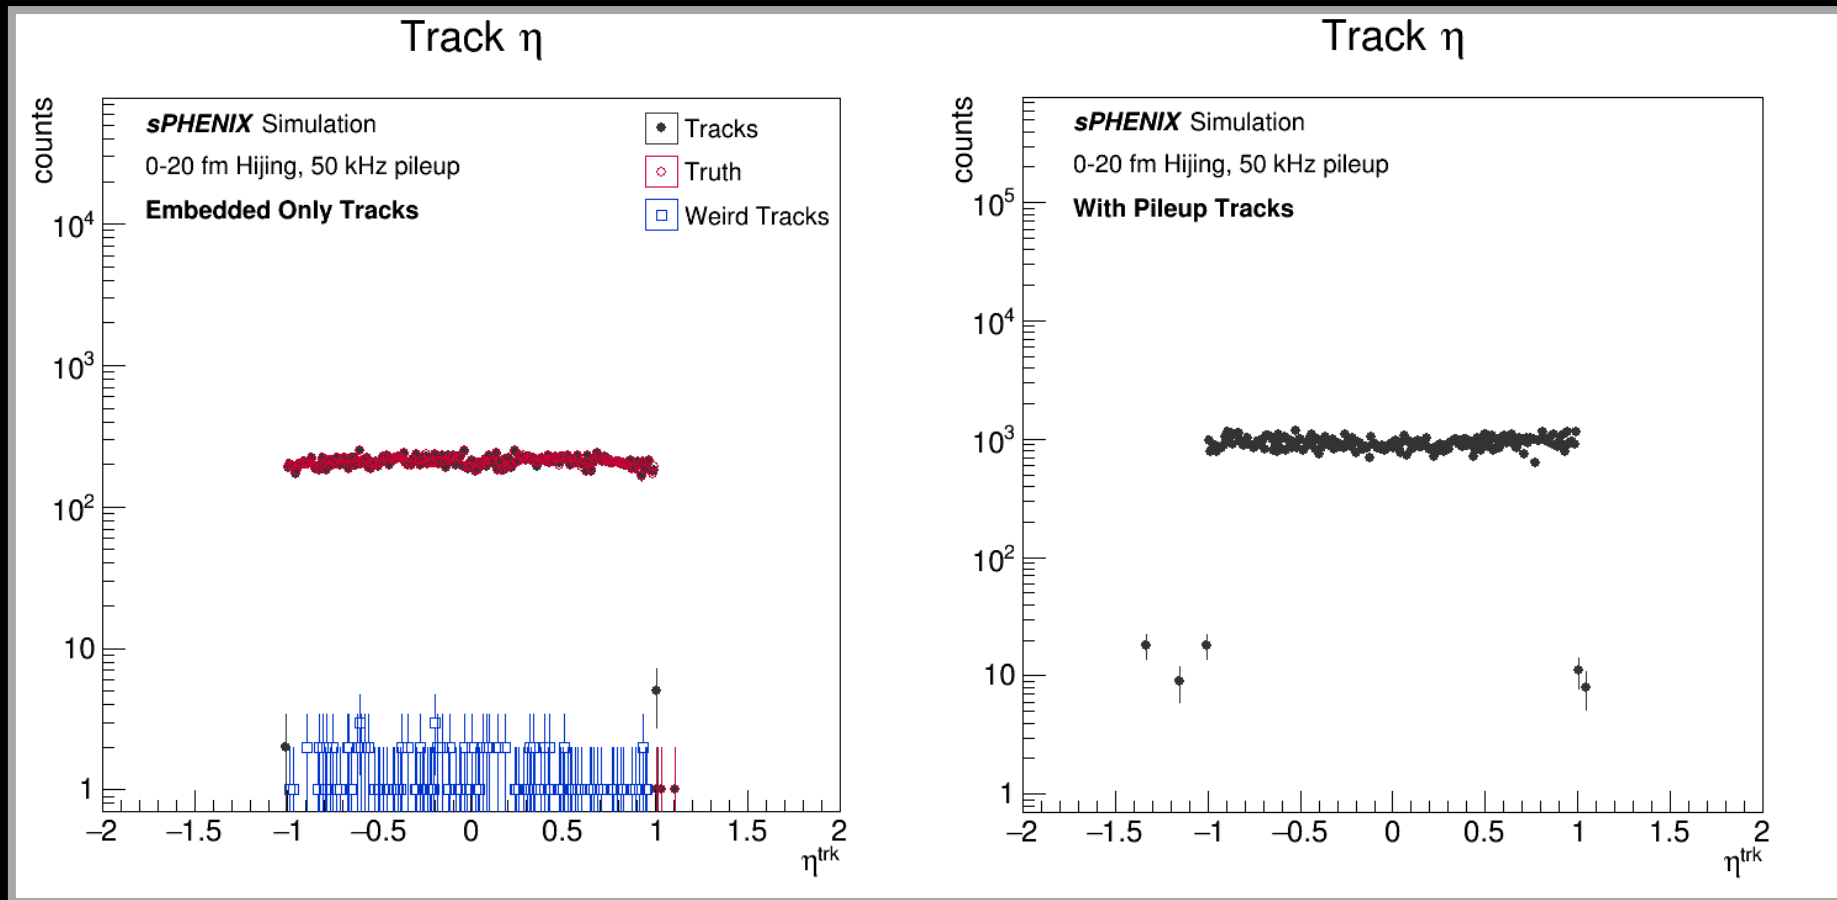

# Embed Only vs. With Pileup | Track DCA<sub>z</sub>

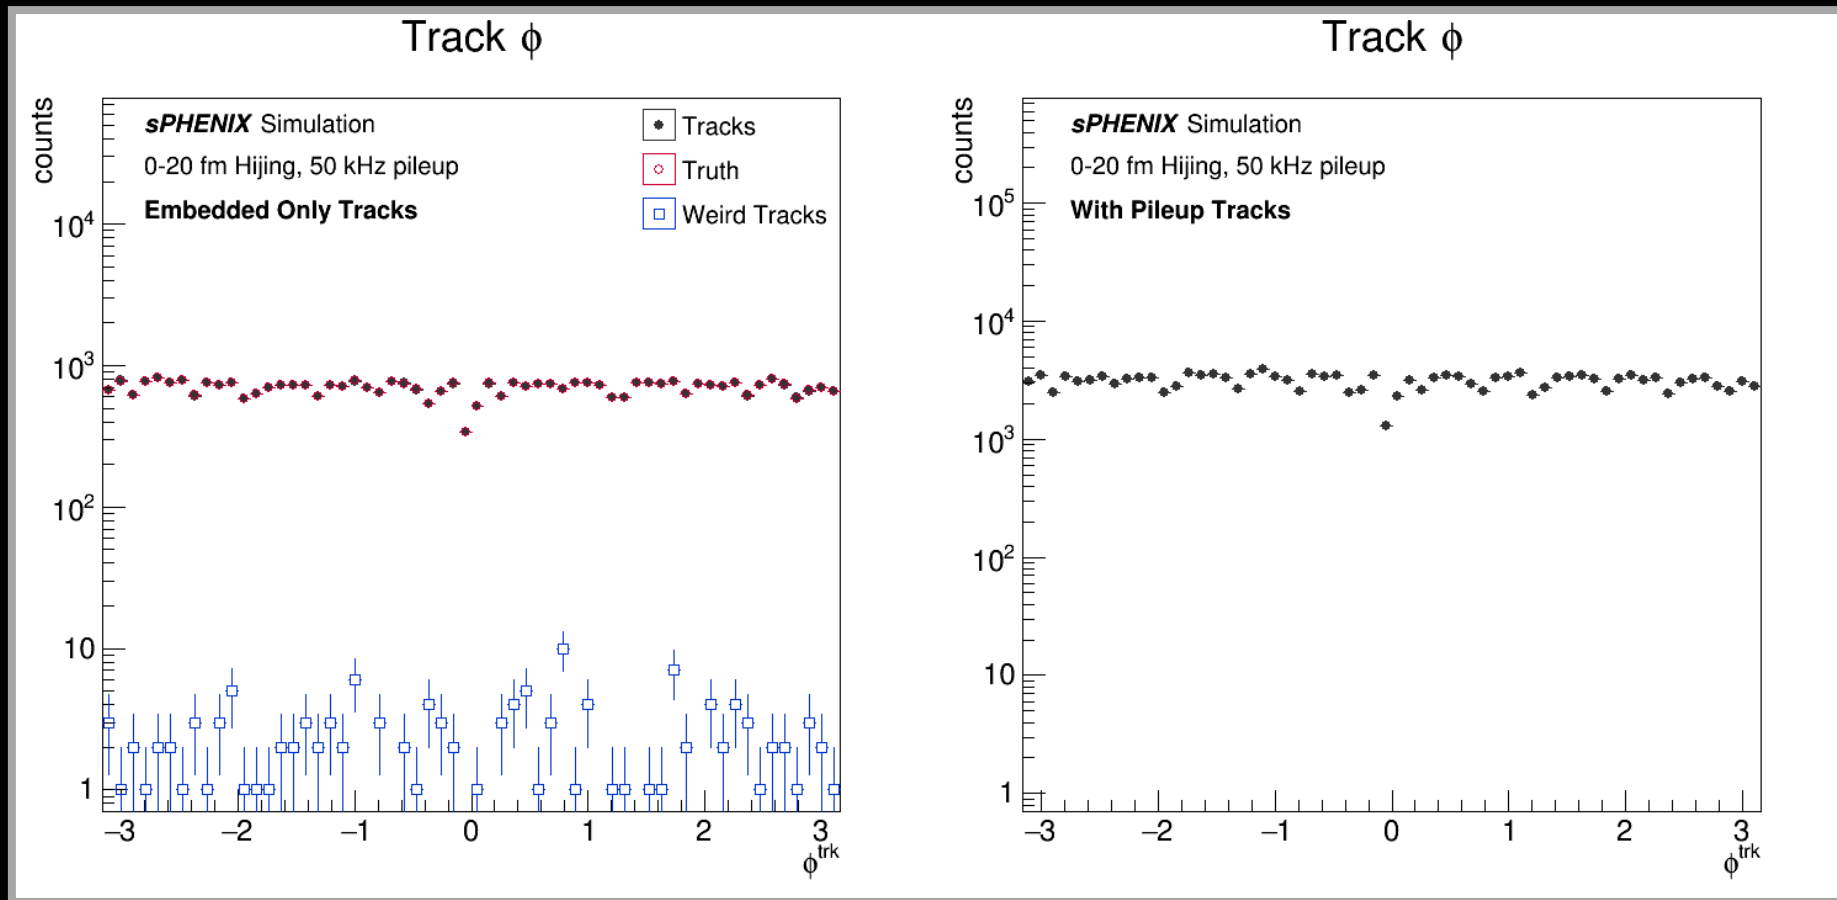

- **Note:** y-axis scale changes b/n left and right
  - Will fix next time..

# Embed Only vs. With Pileup | Track $\eta$

- **Note:** y-axis scale changes b/n left and right
  - Will fix next time..

# Embed Only vs. With Pileup | Track $\phi$

- **Note:** y-axis scale changes b/n left and right
  - Will fix next time..

# Embed Only vs. With Pileup | Track $p_T$

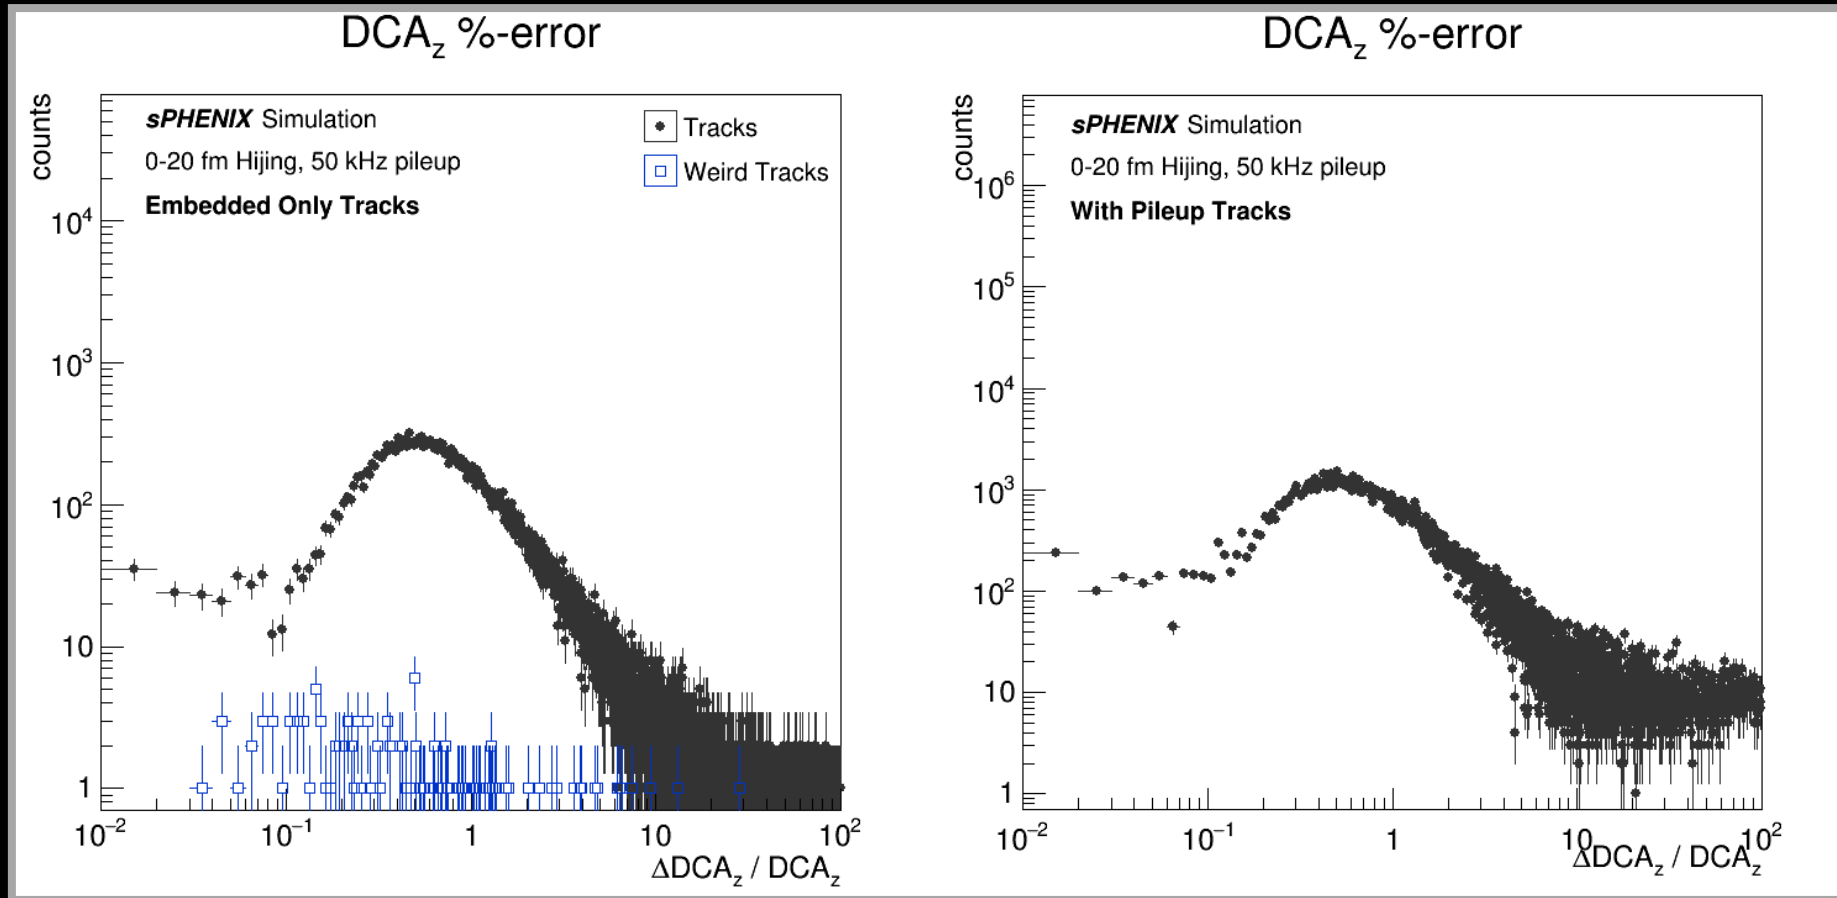

- **Note:** y-axis scale changes b/n left and right
  - Will fix next time..

# Embed Only vs. With Pileup %-Error | Track DCA<sub>xy</sub>

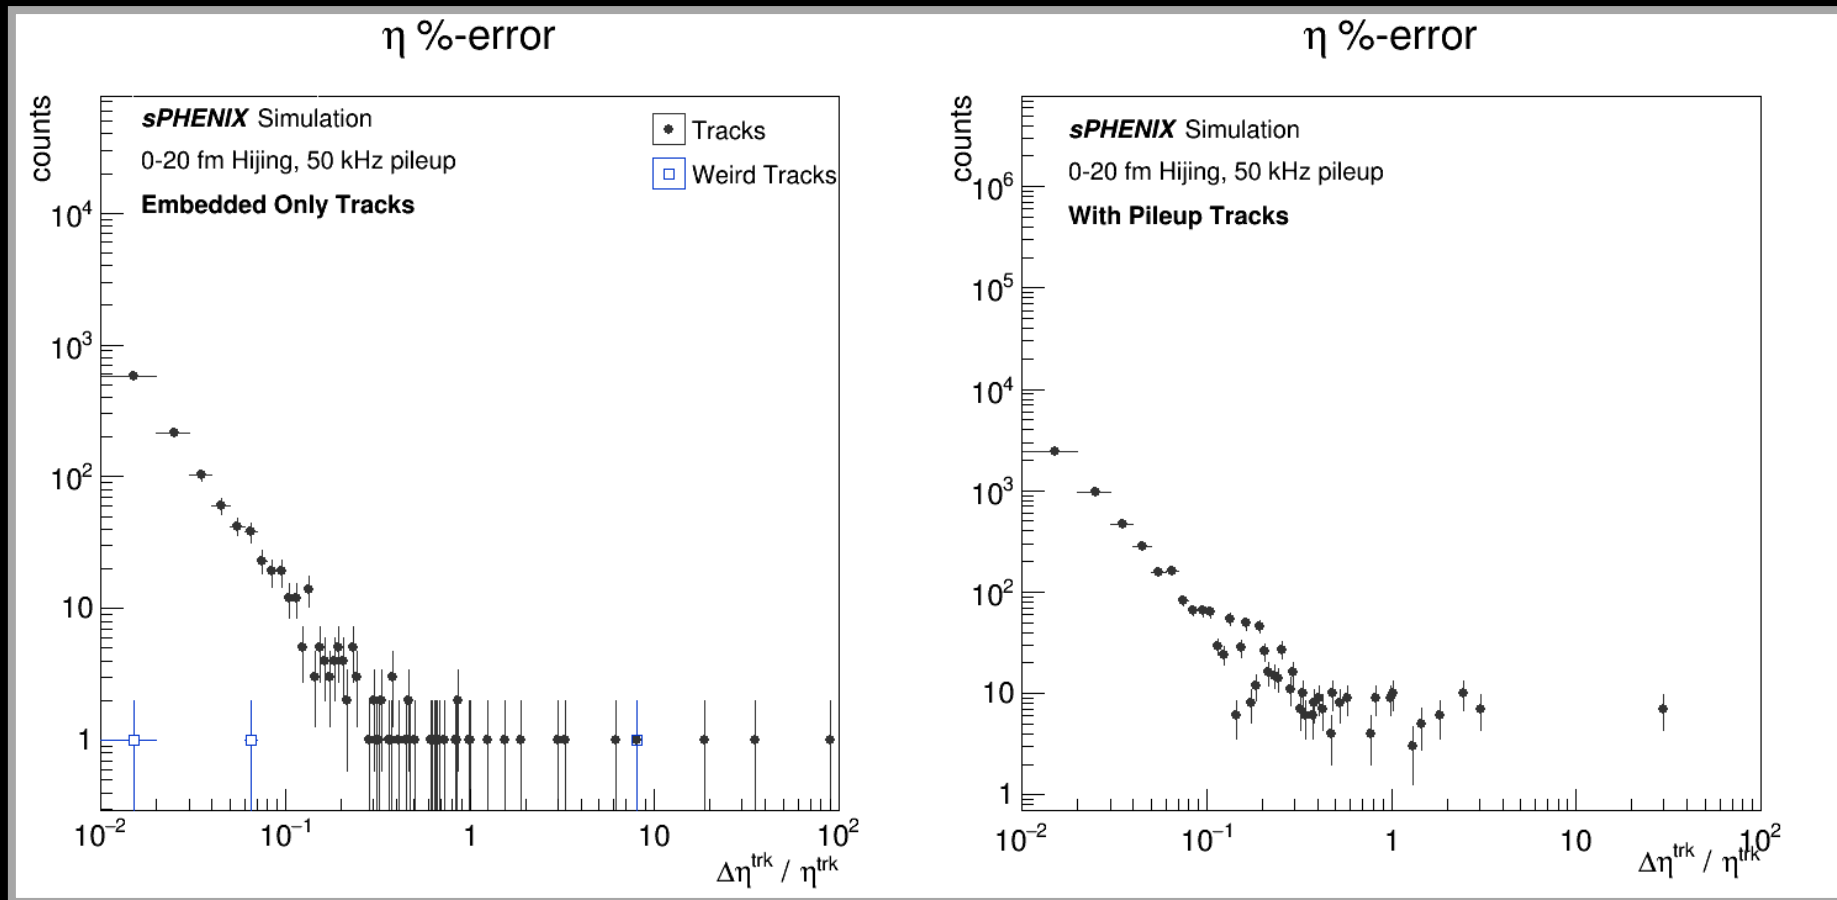

- **Note:** y-axis scale changes b/n left and right
  - Will fix next time..

# Embed Only vs. With Pileup %-Error | Track DCAz

- **Note:** y-axis scale changes b/n left and right
  - Will fix next time..

# Embed Only vs. With Pileup %-Error | Track $\eta$

- **Note:** y-axis scale changes b/n left and right
  - Will fix next time..

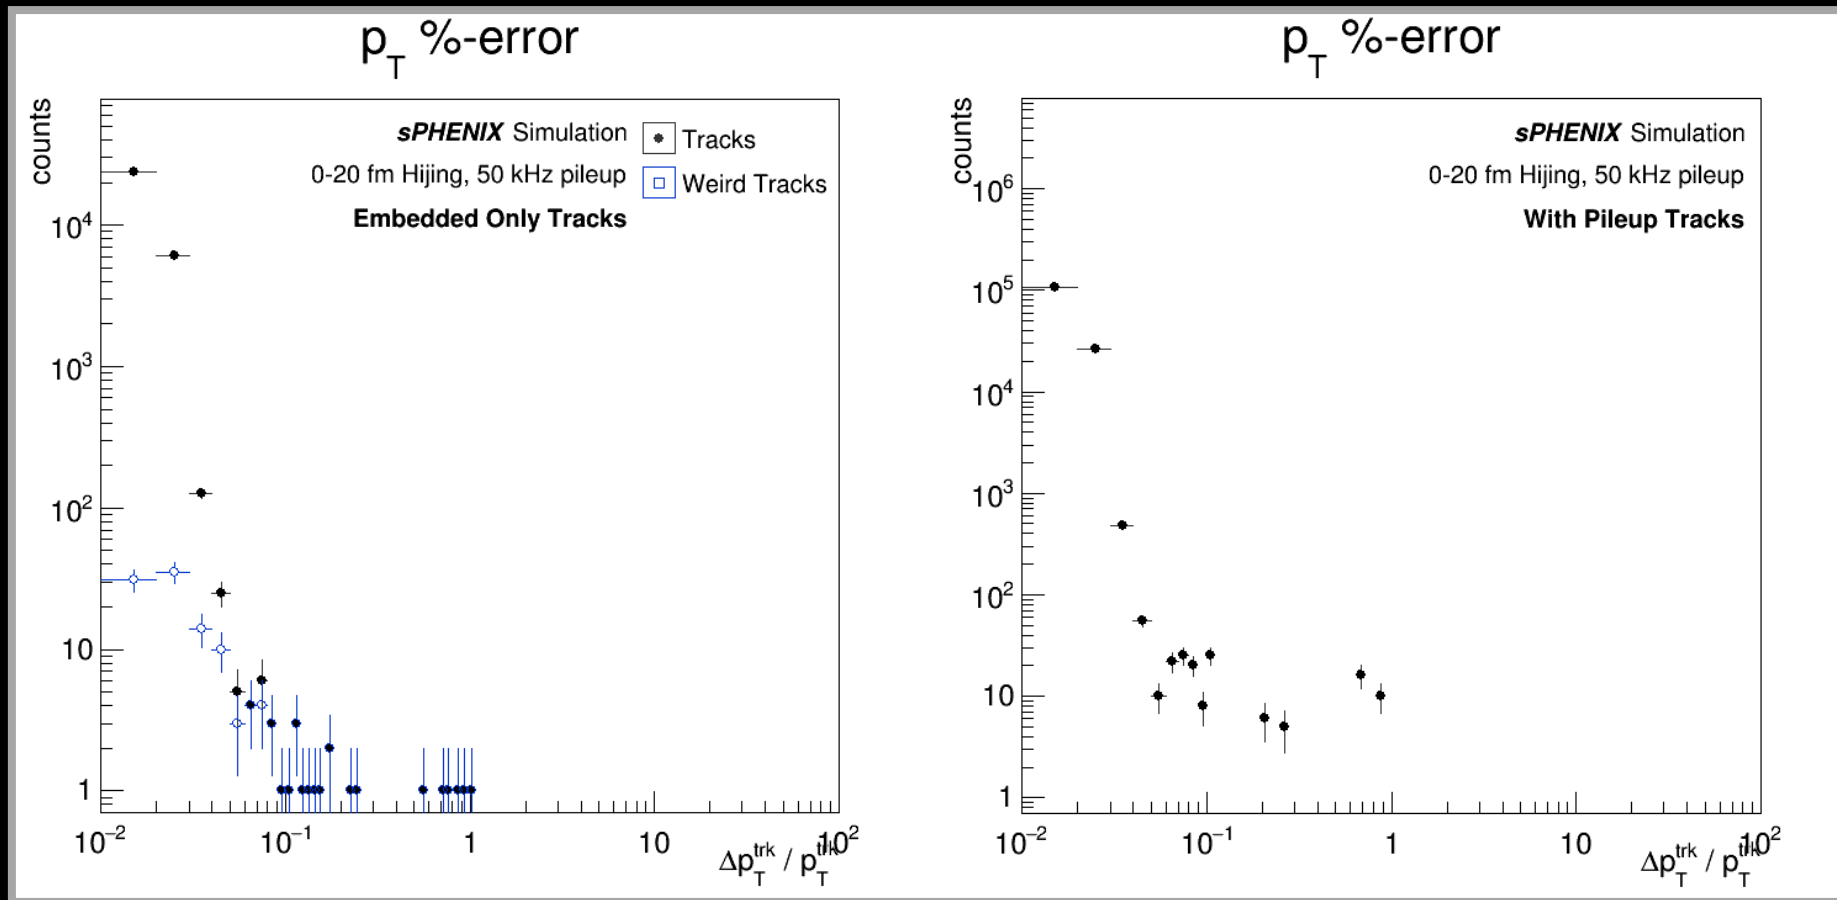

# Embed Only vs. With Pileup %-Error | Track $\phi$

- **Note:** y-axis scale changes b/n left and right
  - Will fix next time..

# Embed Only vs. With Pileup %-Error | Track $p_T$

- **Note:** y-axis scale changes b/n left and right
  - Will fix next time..

# Update Details

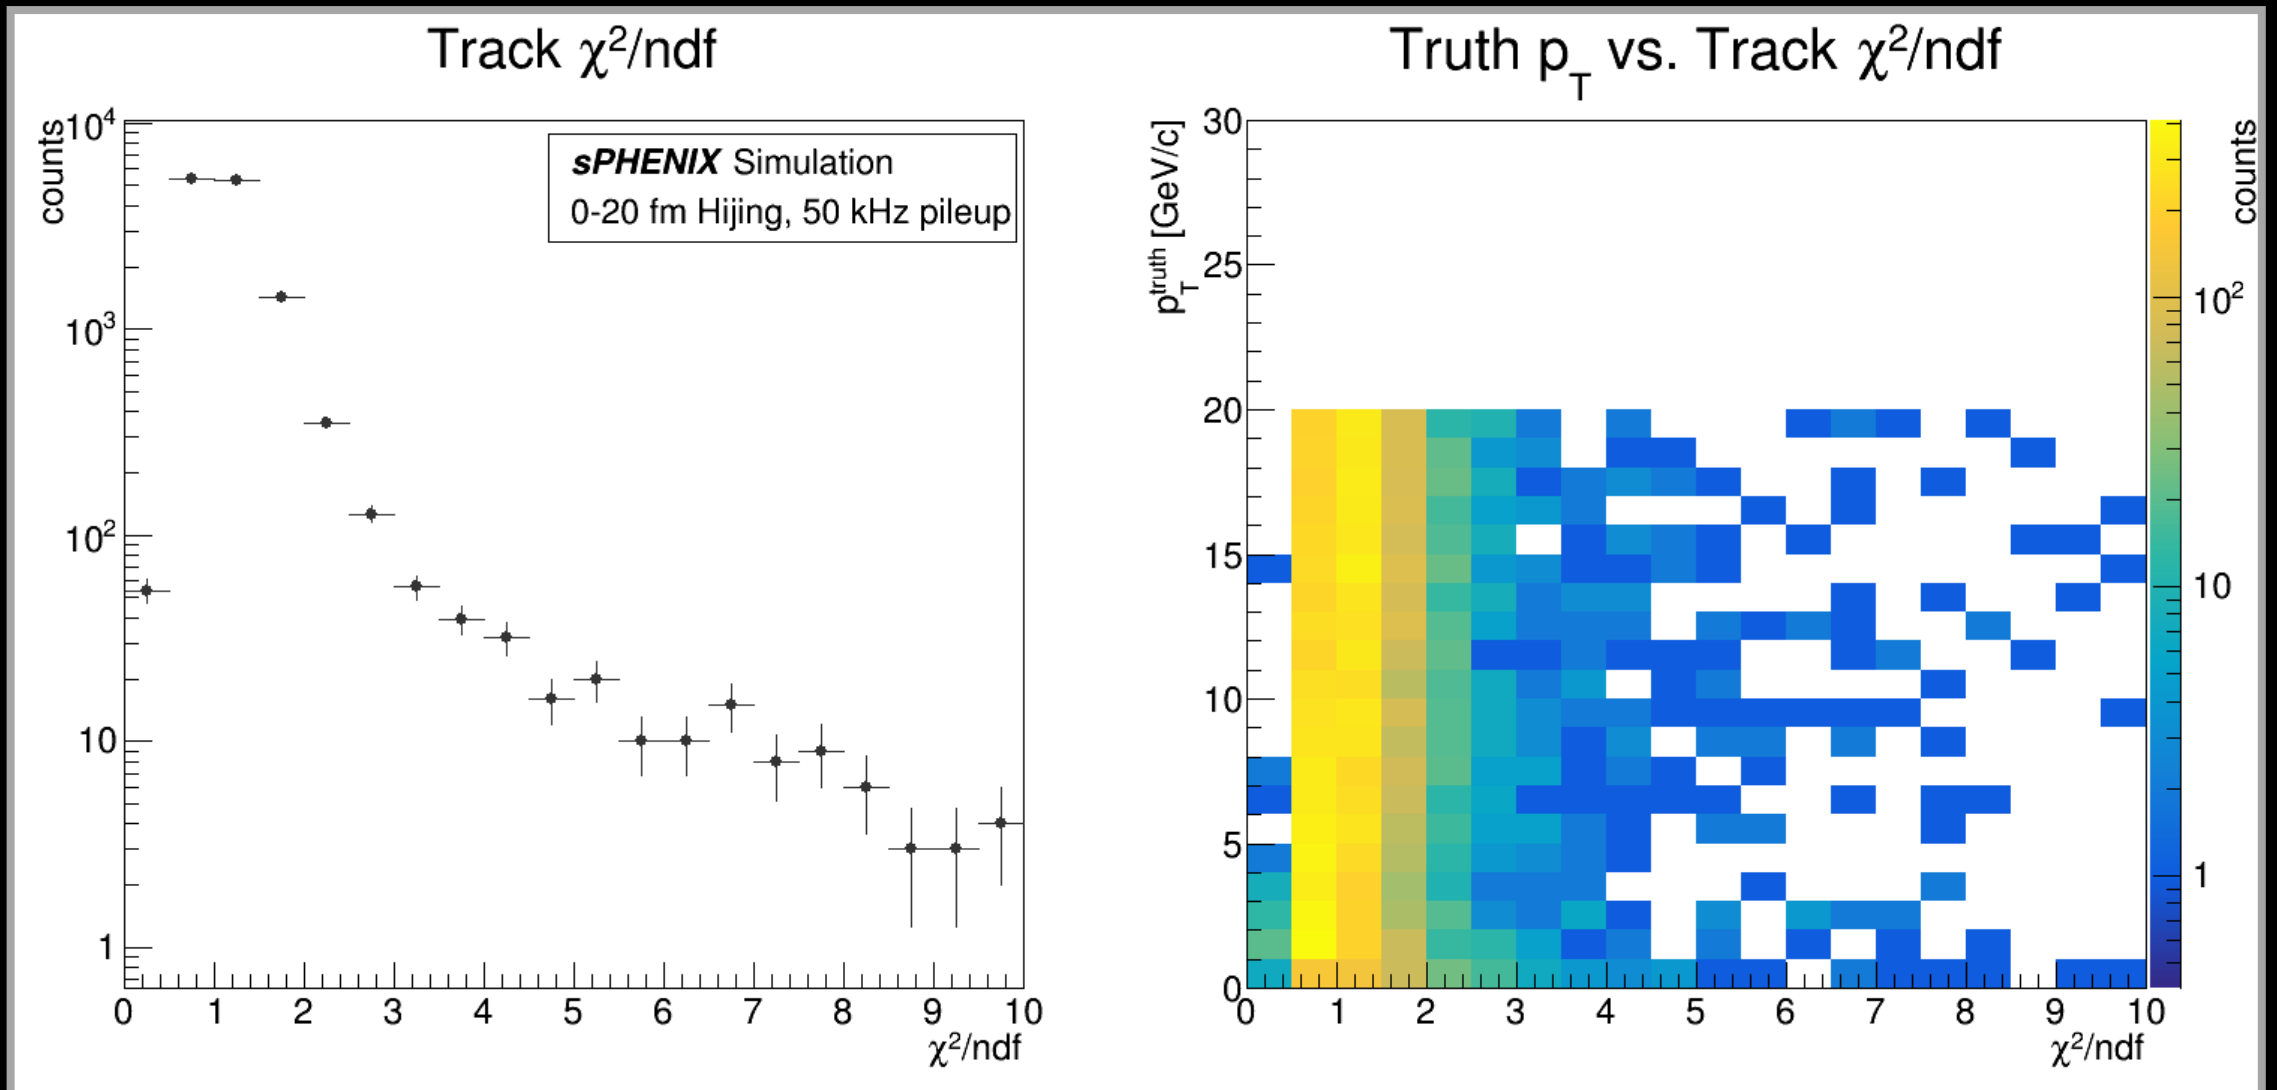

- Currently running over larger sample
  - 0 – 20 fm Hijing (**type = 4**)
  - 50 kHz pileup (**pileup = 1**)
  - ☞ **12868 tracks shown here** (4257 last time)
- **Tracks shown are embedded only**
  - Wanted to look at pileup tracks as well, but forgot to run sample
  - Will look at next week...

- **Plots shown here:**
  - Plots from last time w/ more stats, and compared against true  $p_T$
  - A few new quantities ( $\eta, \phi...$ )
  - Plots of “scaled” quantities, e.g.  
$$p_T / \Delta p_T$$
- **Will look closer at tracks w/ unusually large (or small)  $p_T^{trk} / p_T^{true}$  next week**

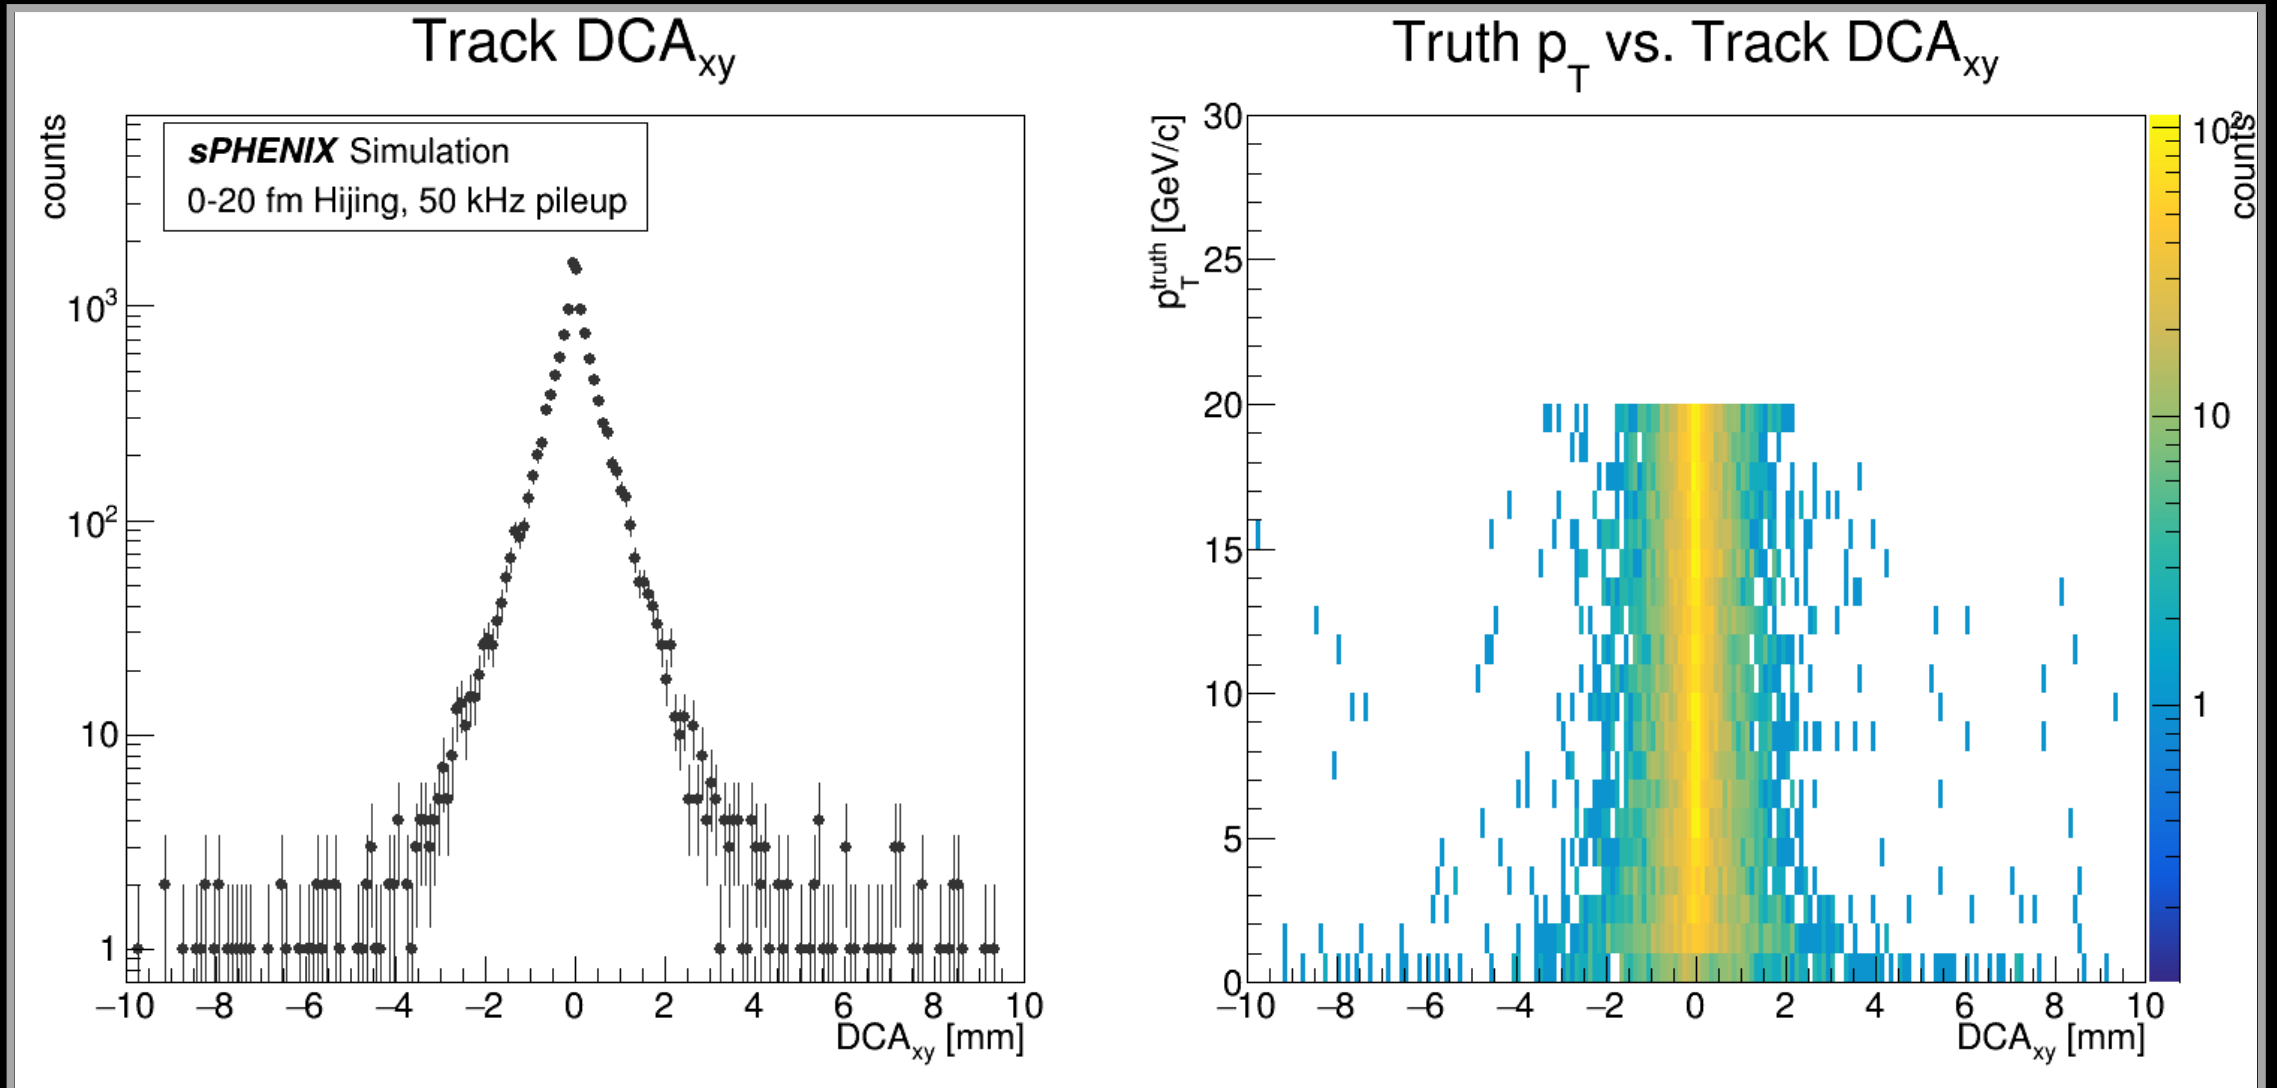

# Updated Plots | Track vs. True $p_T$

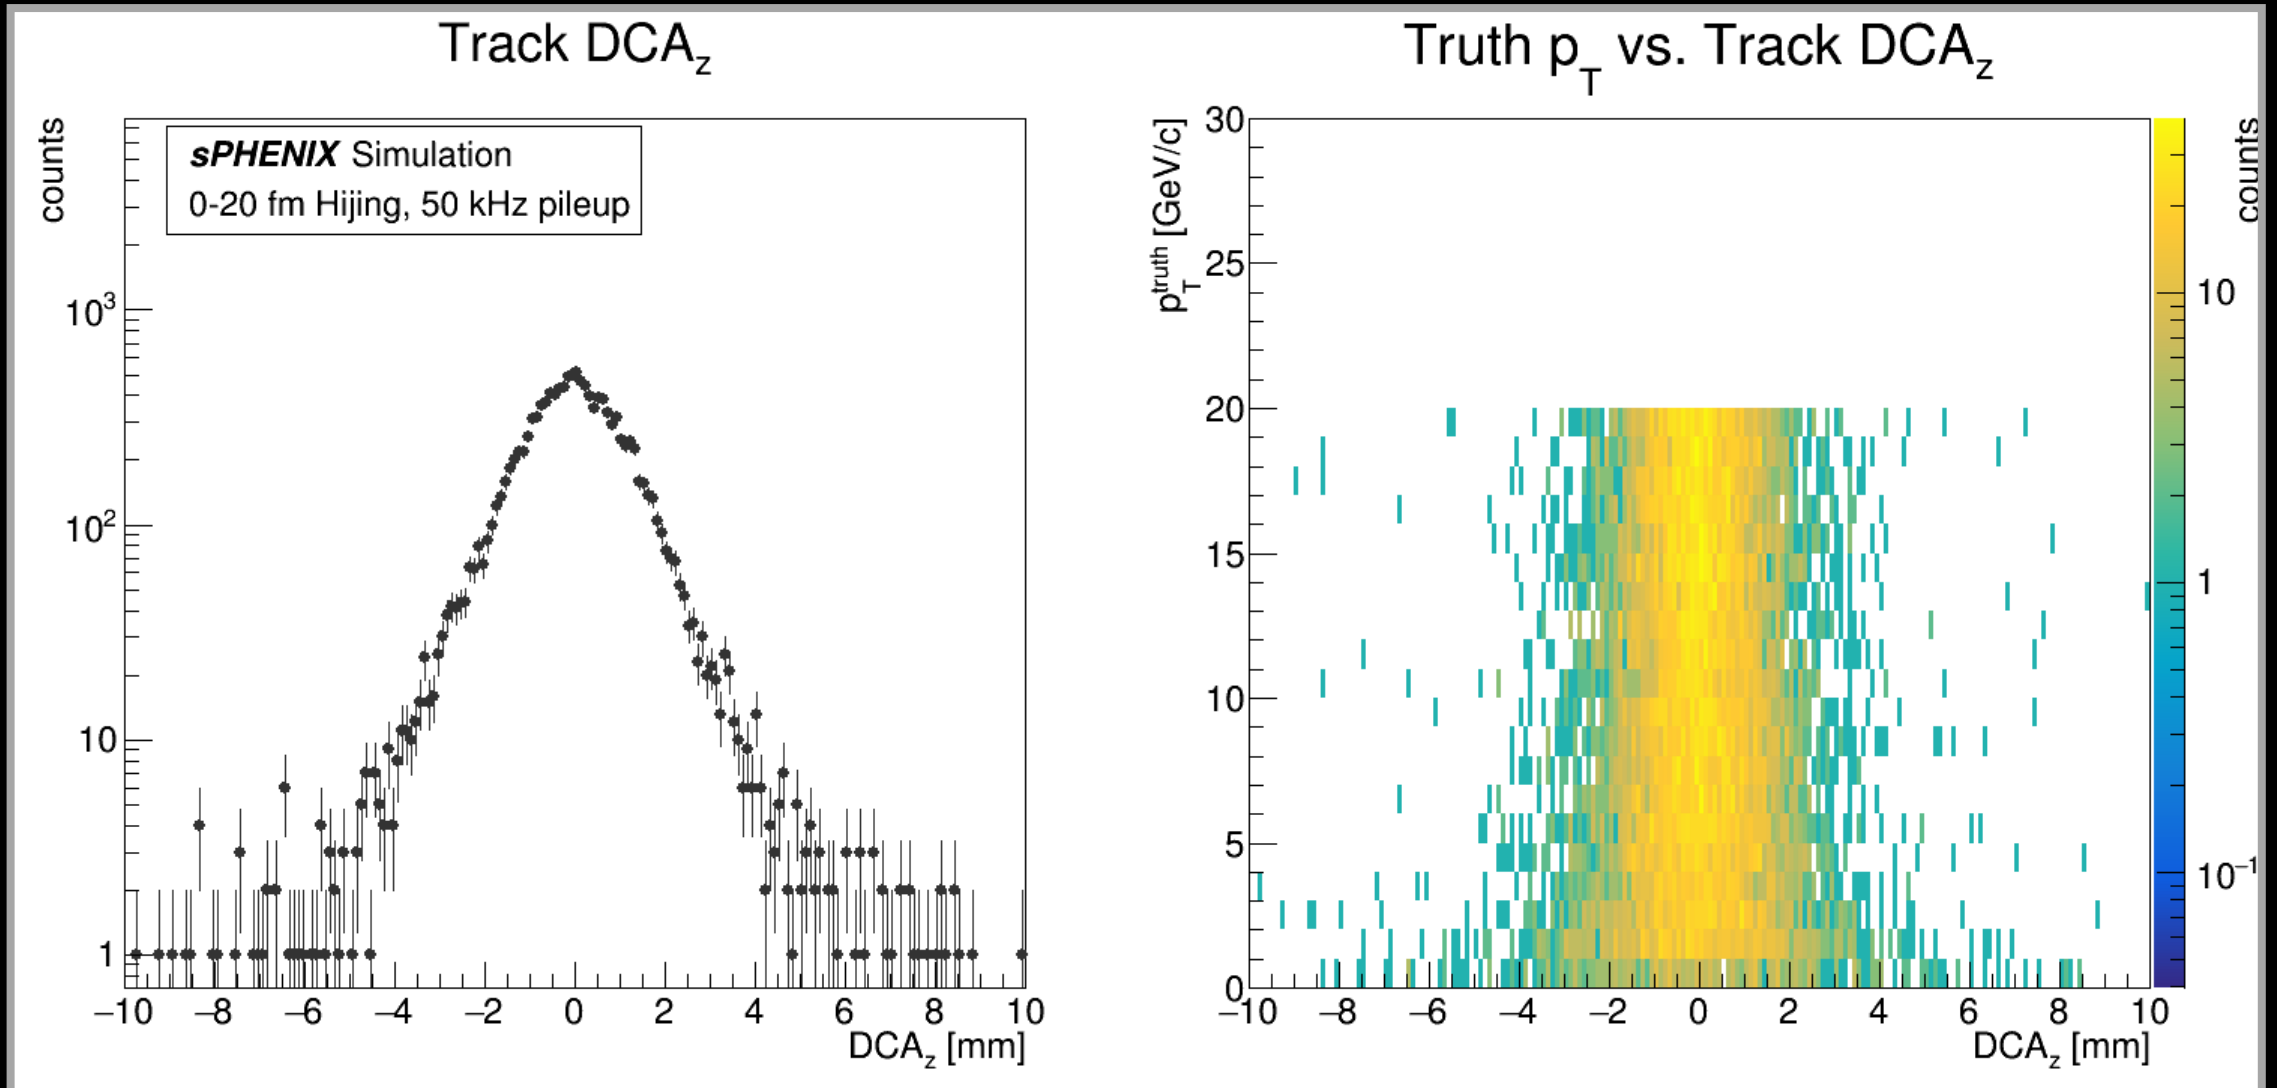

# Updated Plots | Track Quality

# Updated Plots | Track DCA<sub>xy</sub>

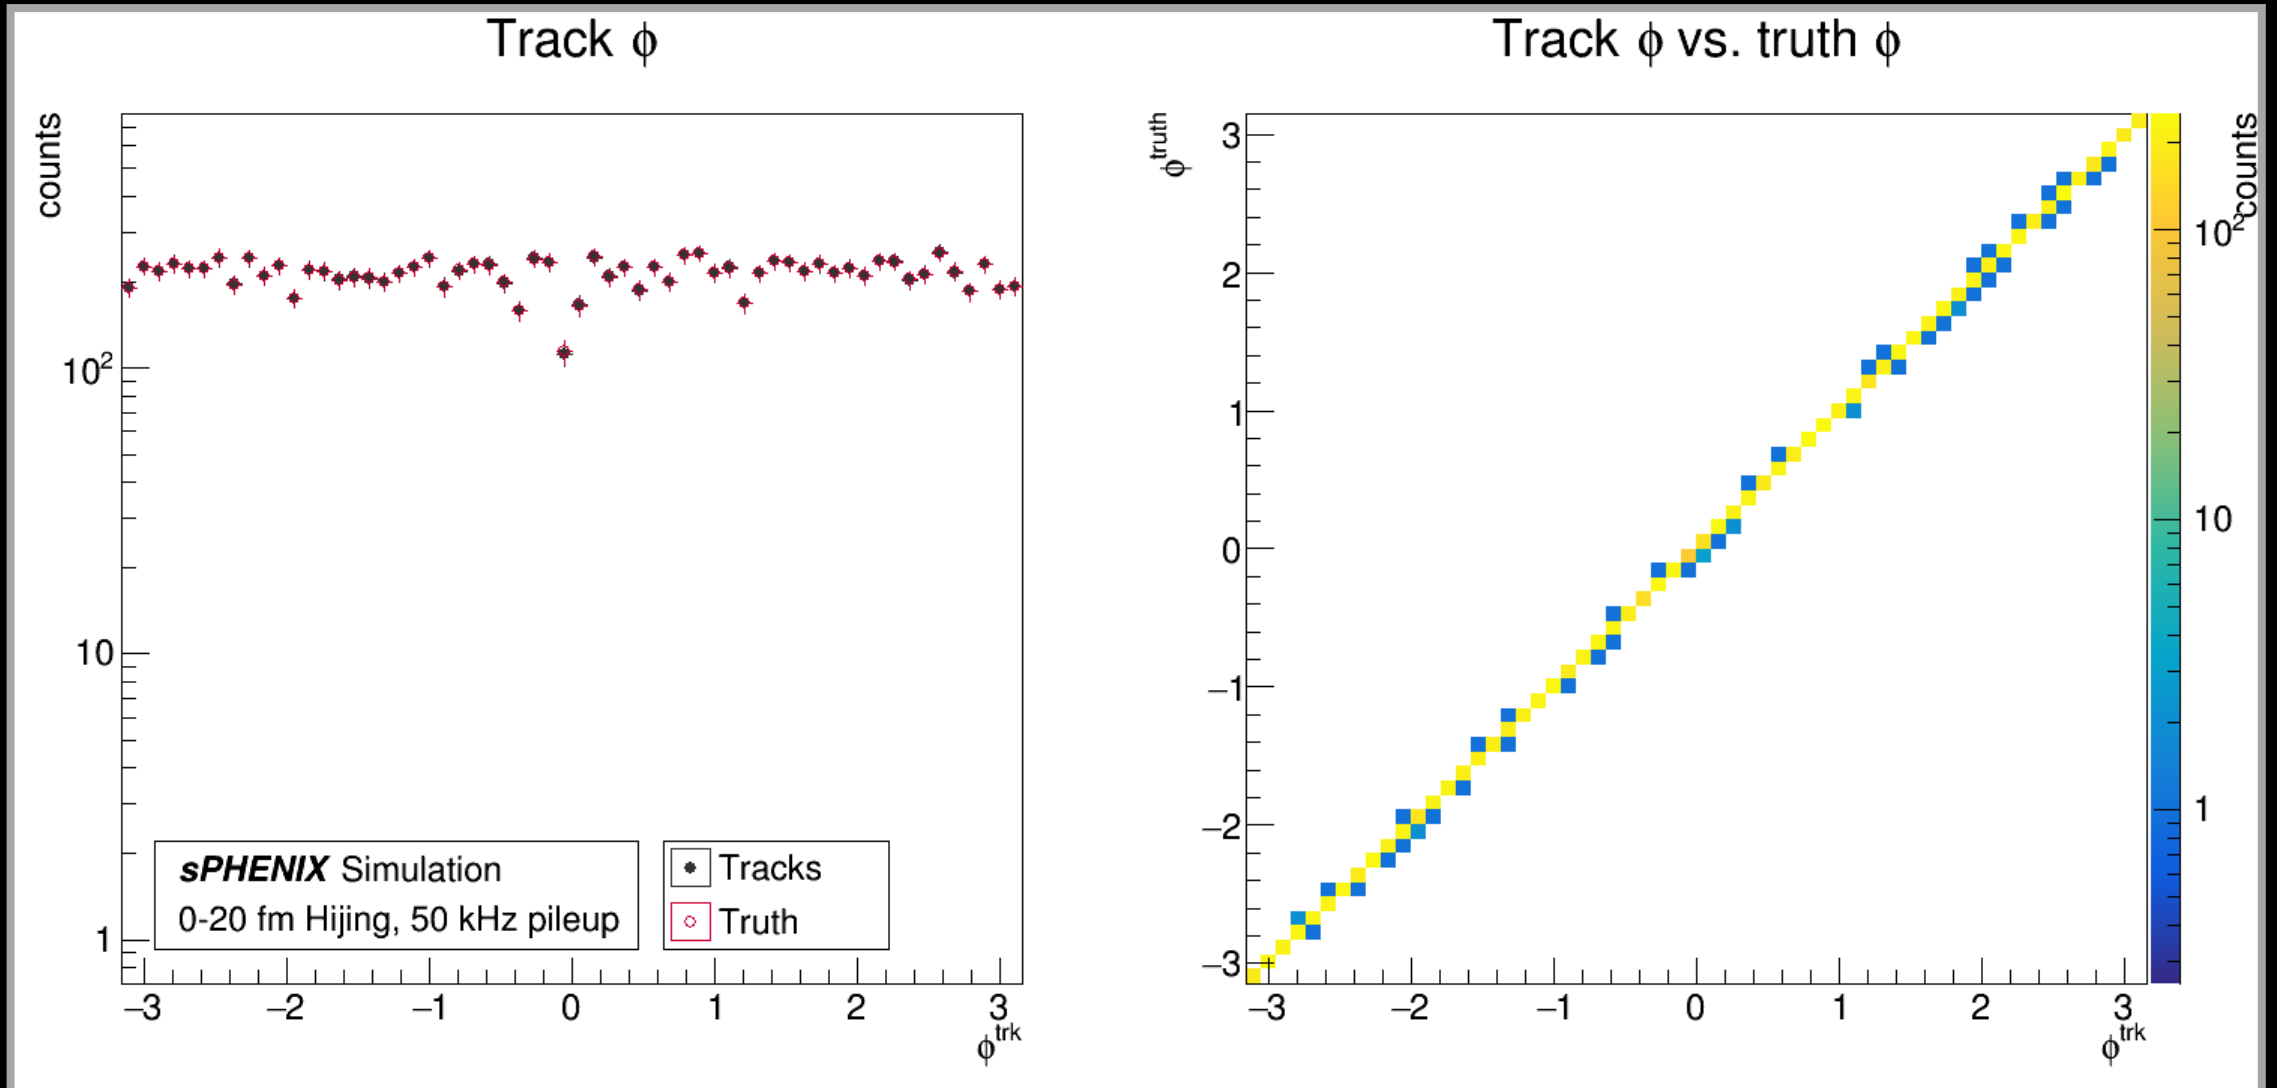

# Updated Plots | Track DCA<sub>z</sub>

# New Quantities | Track vs. True $\eta$

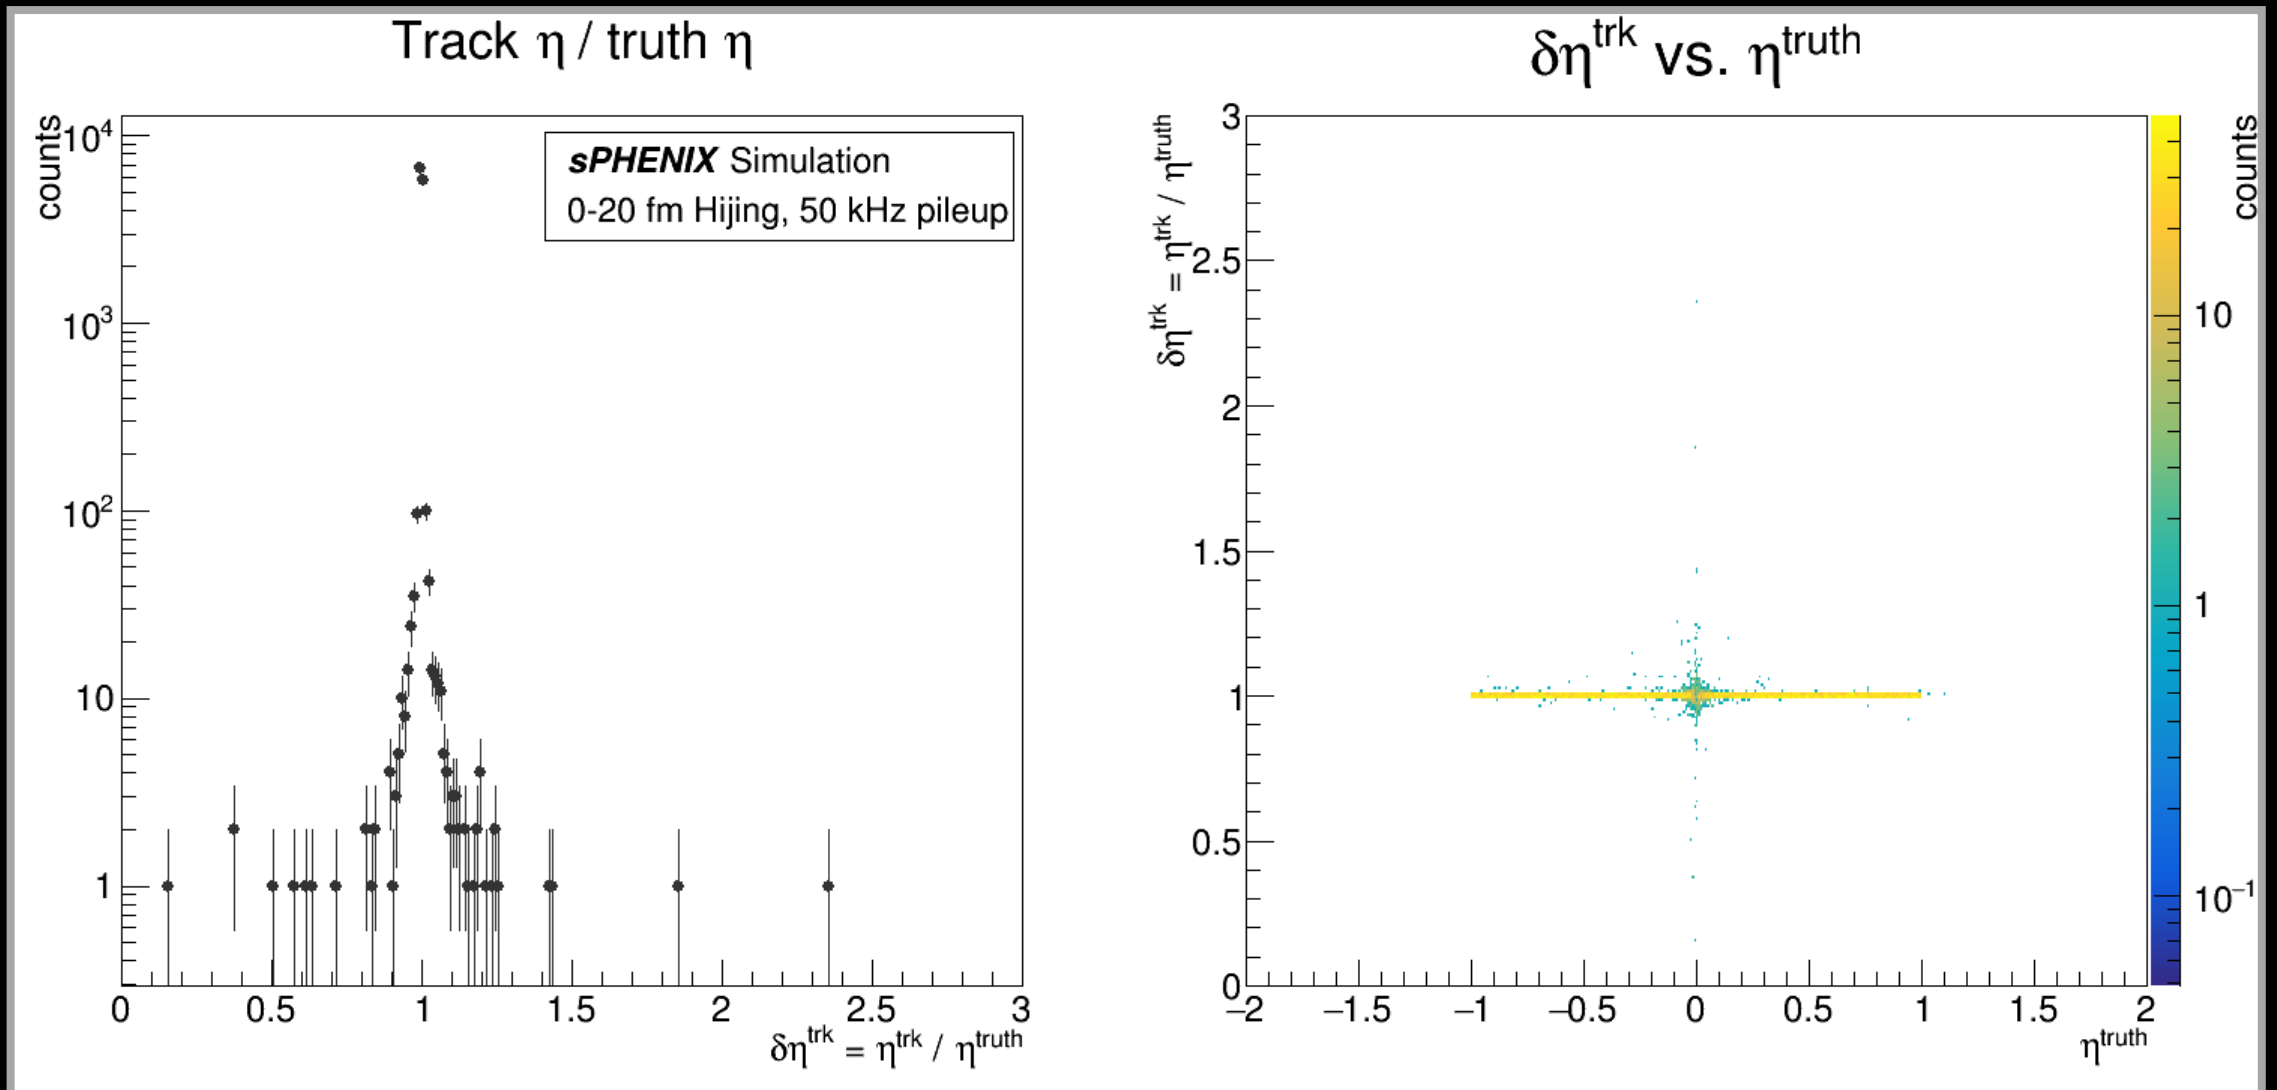

# New Quantities | Track vs. True $\phi$

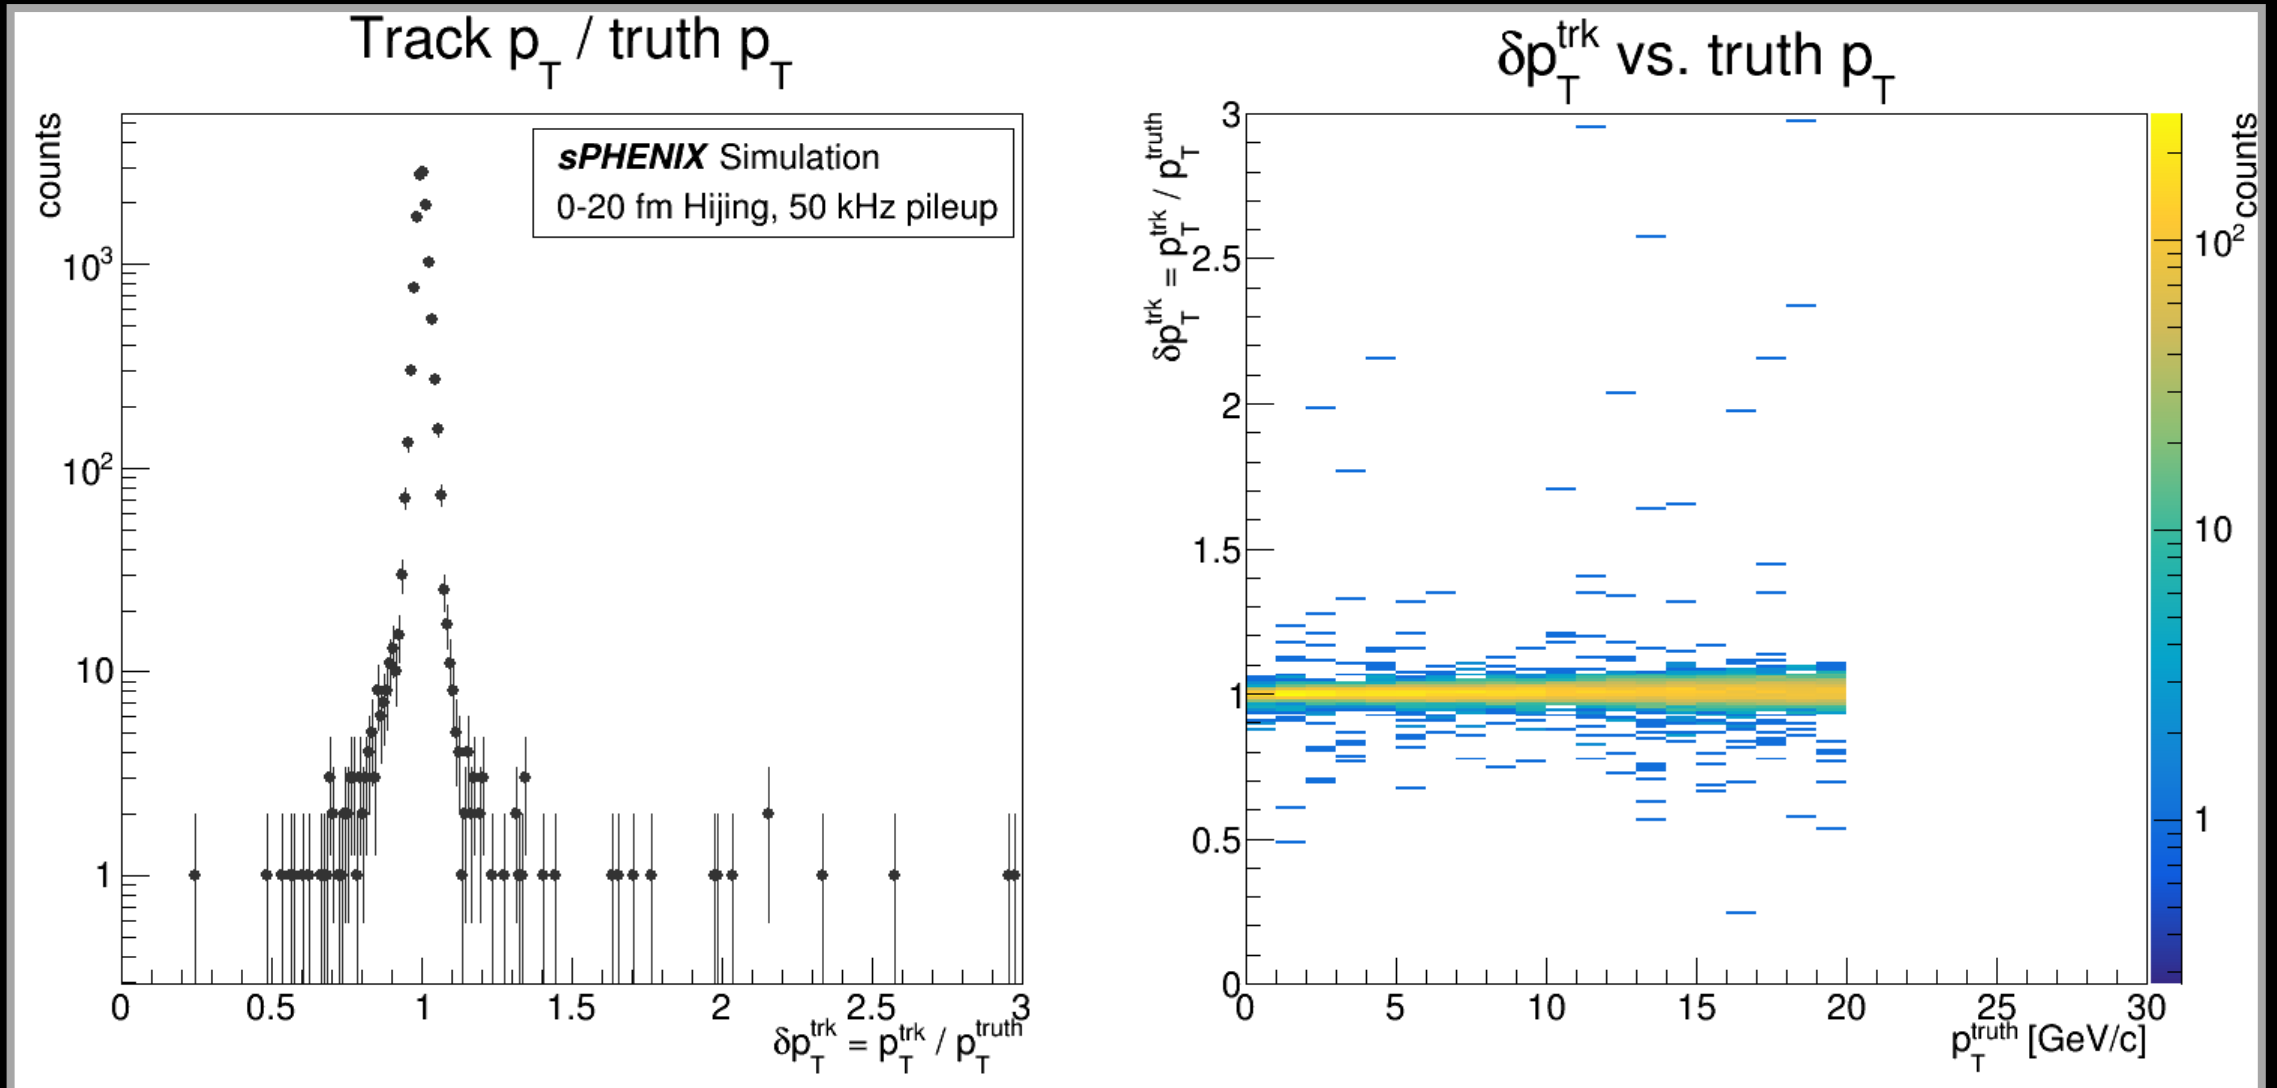

# New Quantities | Fractional vs. True $\eta$

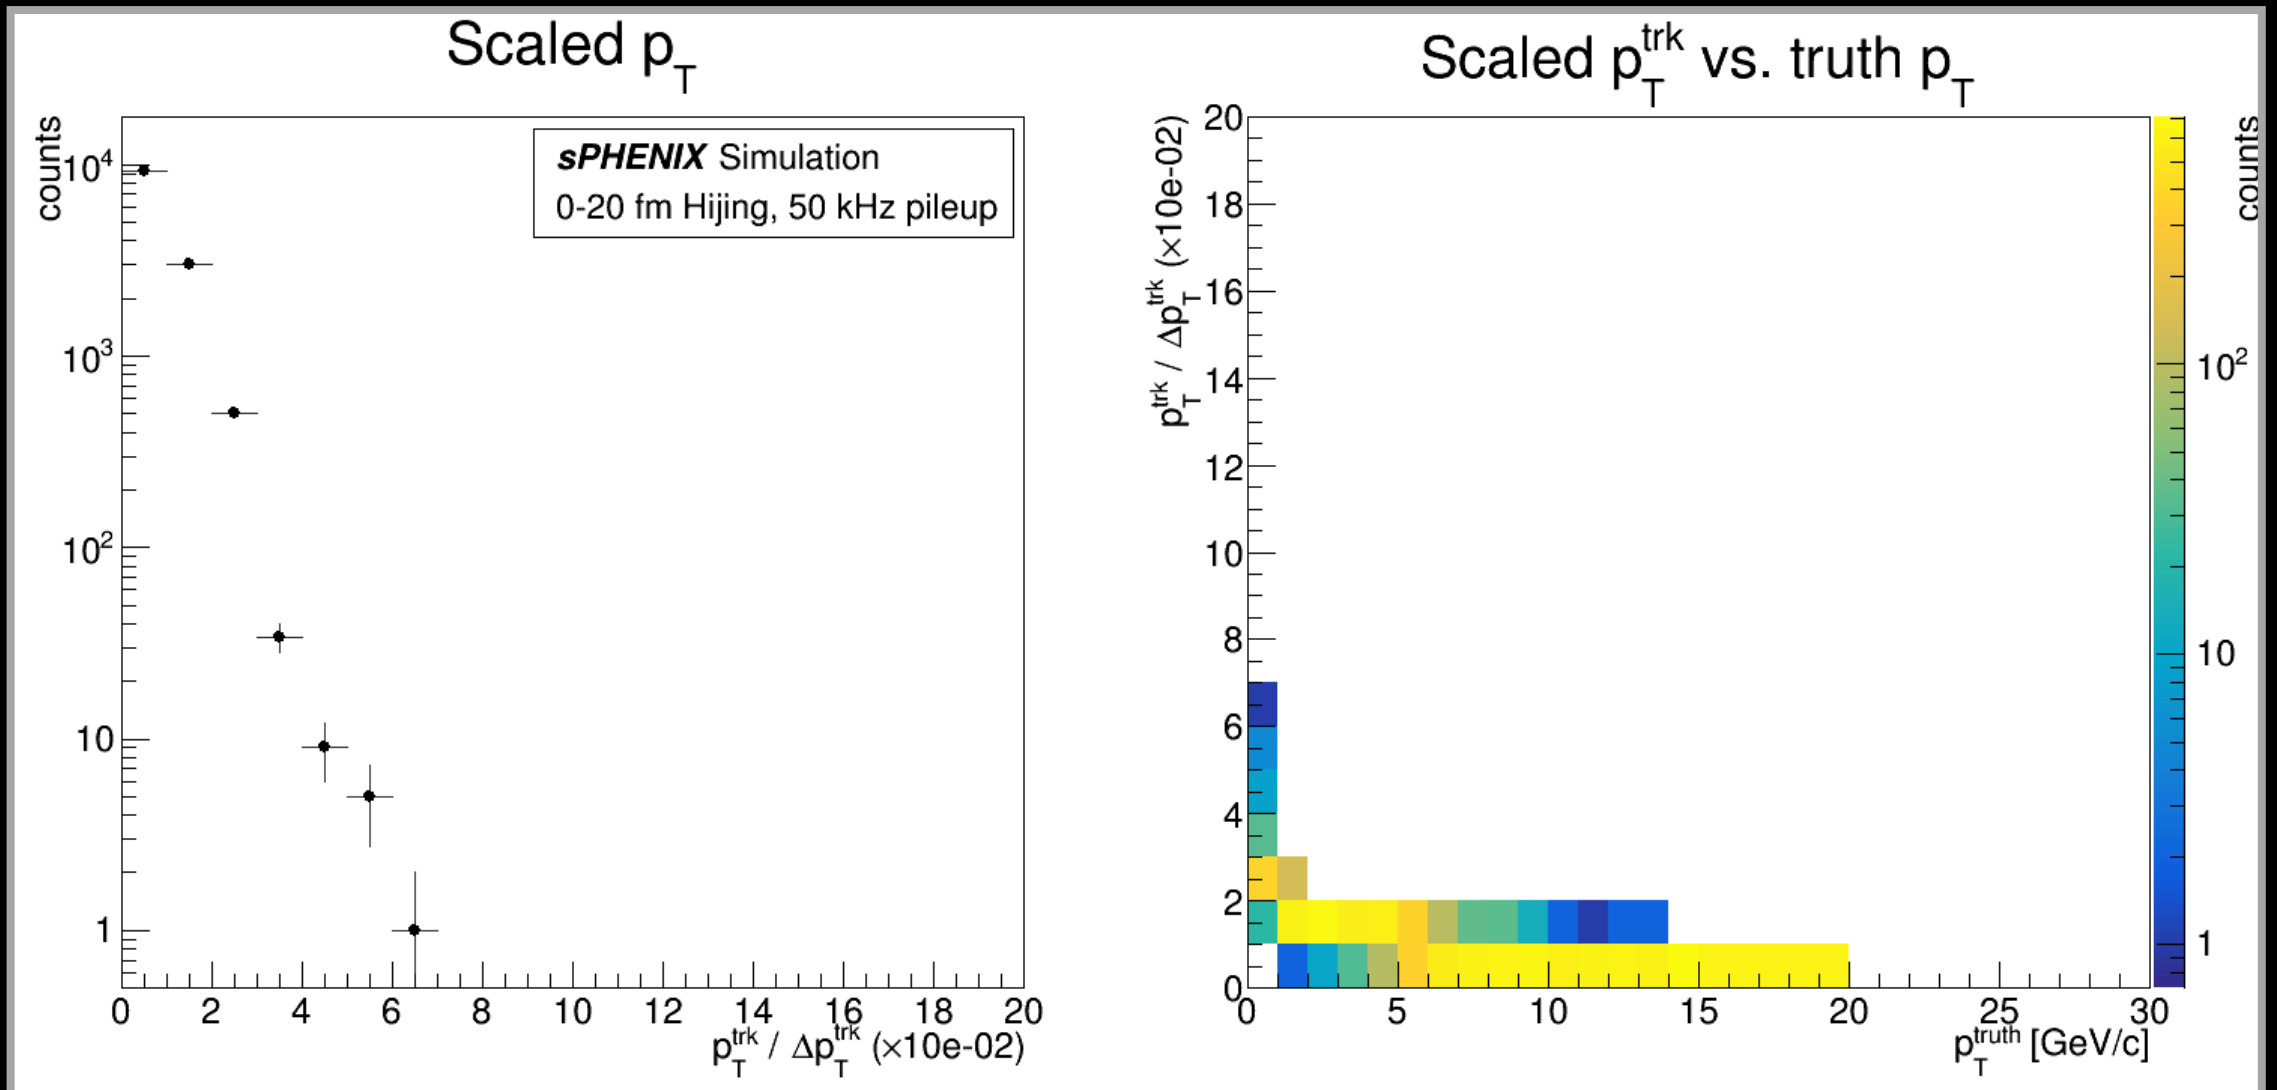

# New Quantities | Fractional vs. True $\phi$

# New Quantities | Fractional vs. True $p_T$

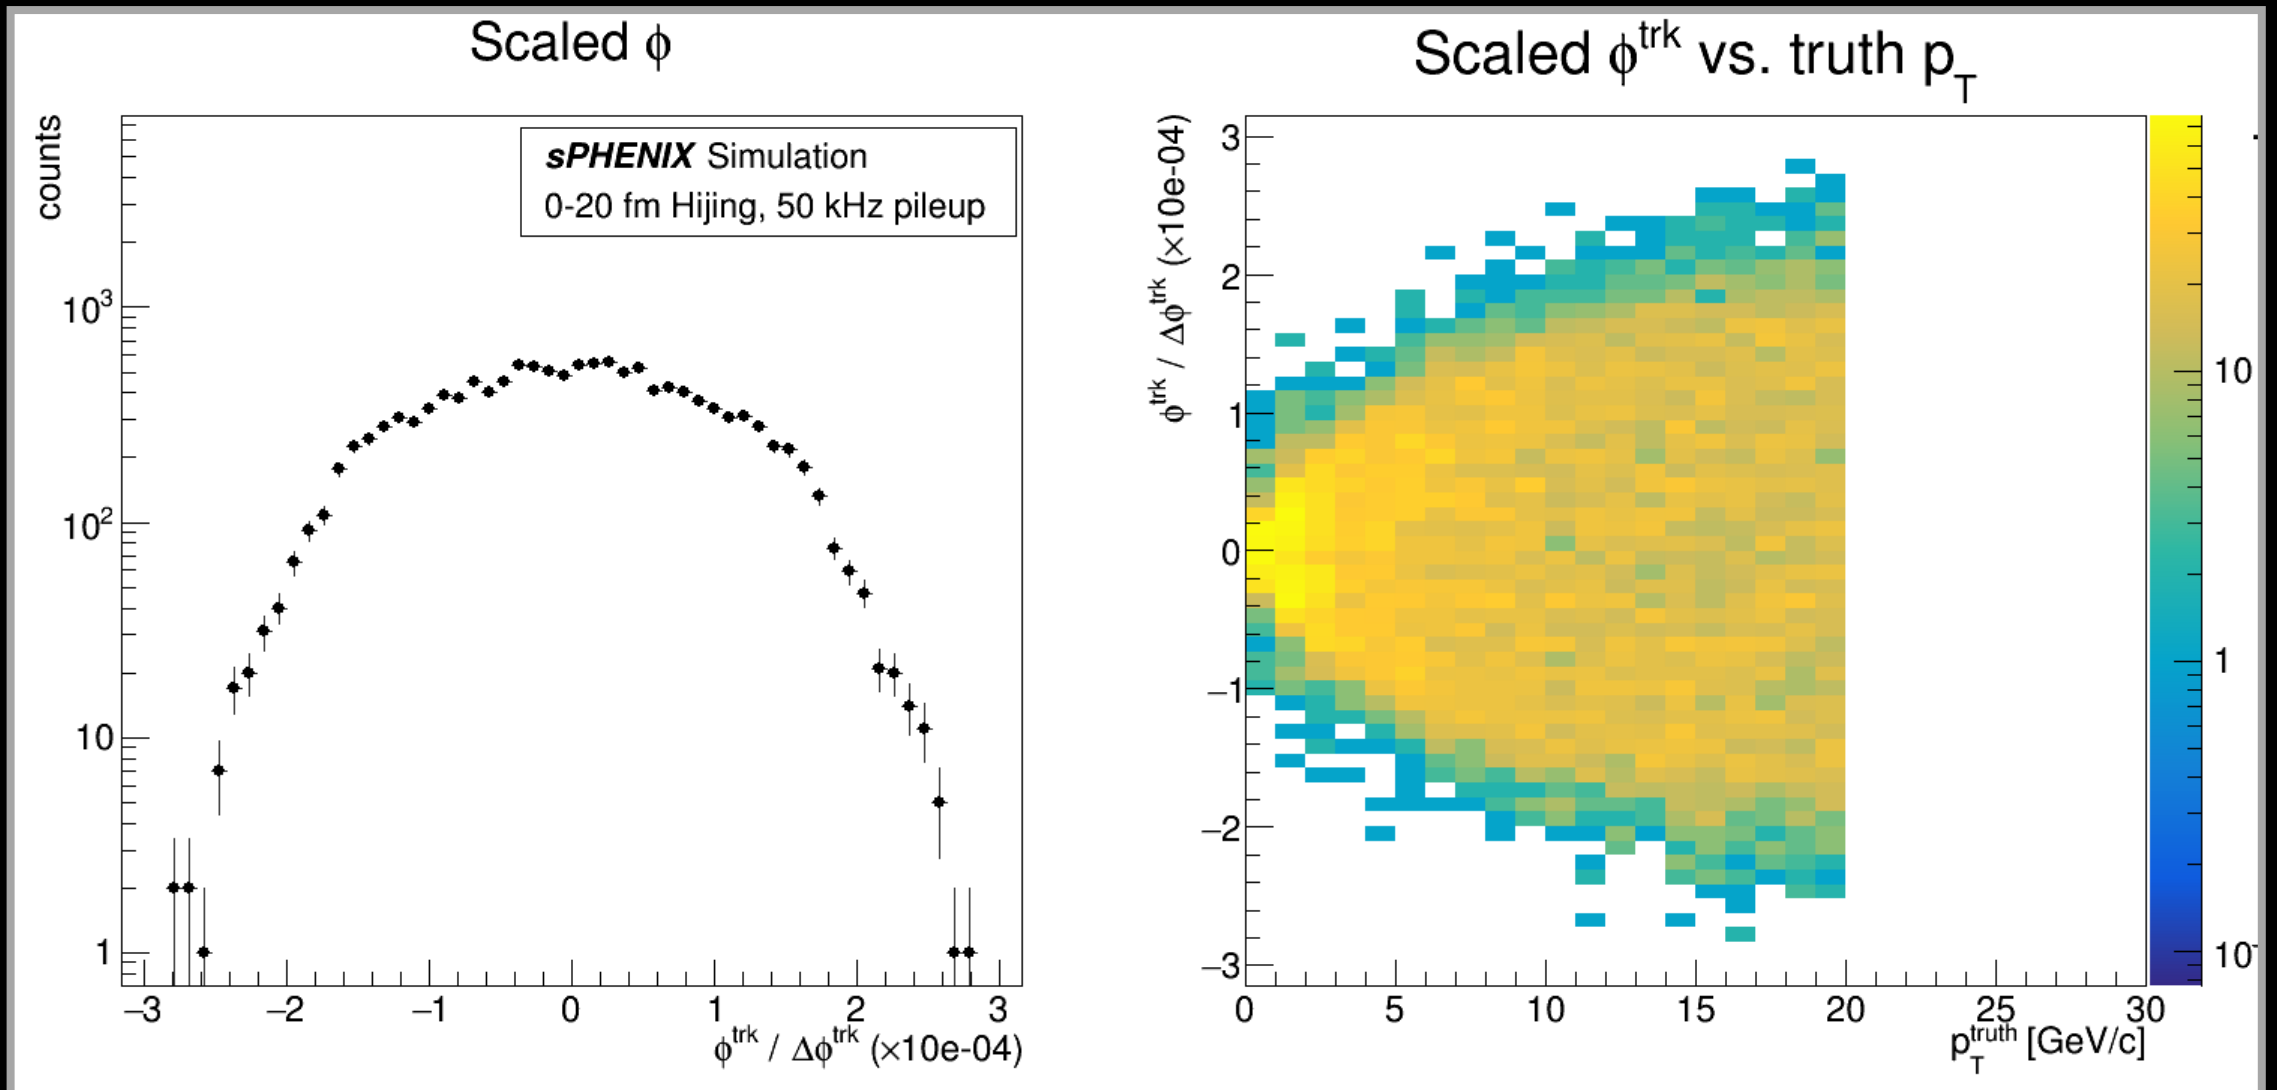

# Scaled Quantities | Track $p_T$

# Scaled Quantities | Track $\eta$

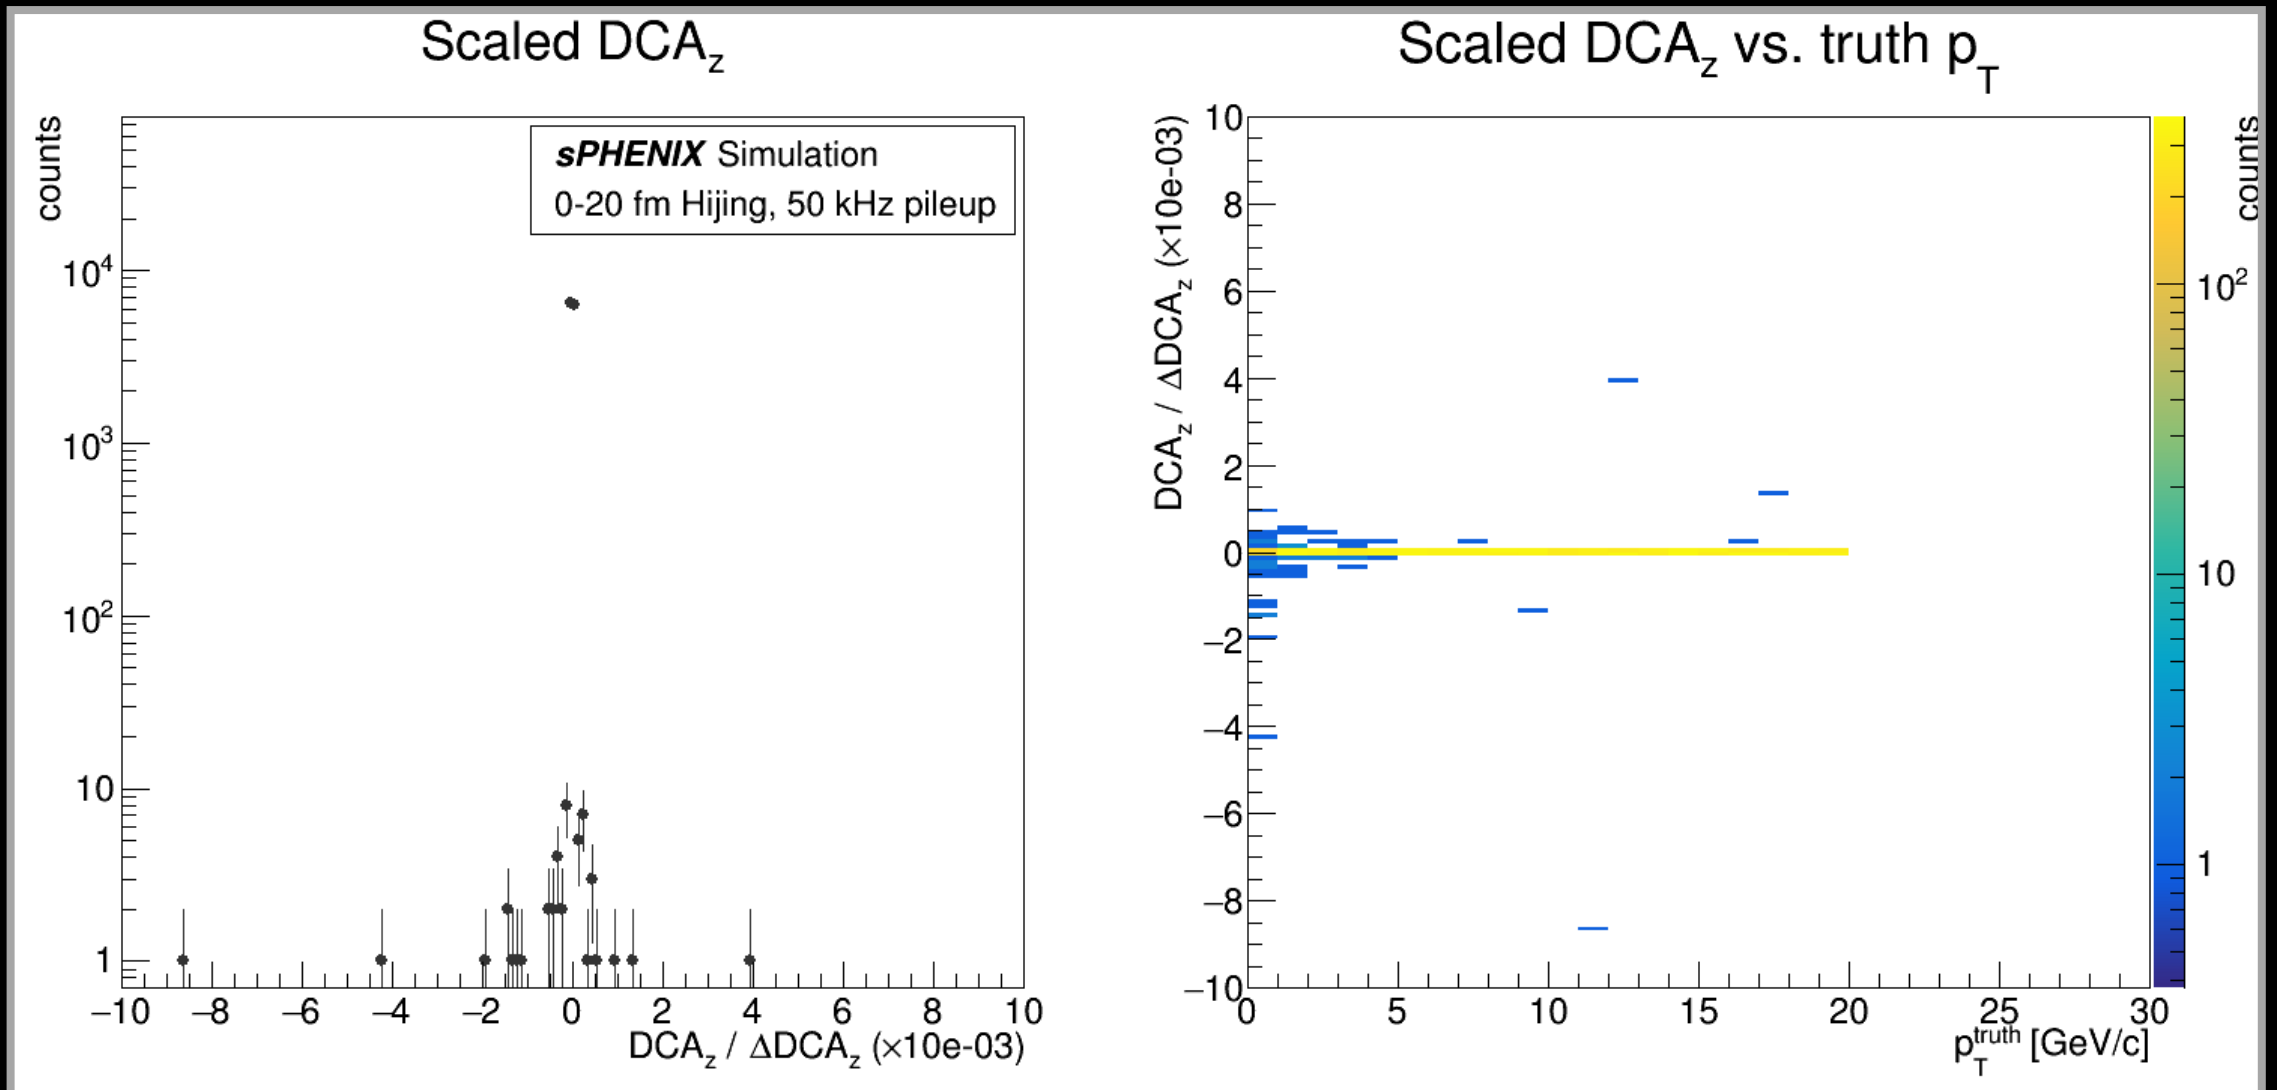

# Scaled Quantities | Track $\phi$

# Scaled Quantities | Track DCA<sub>xy</sub>

# Scaled Quantities | Track DCAz

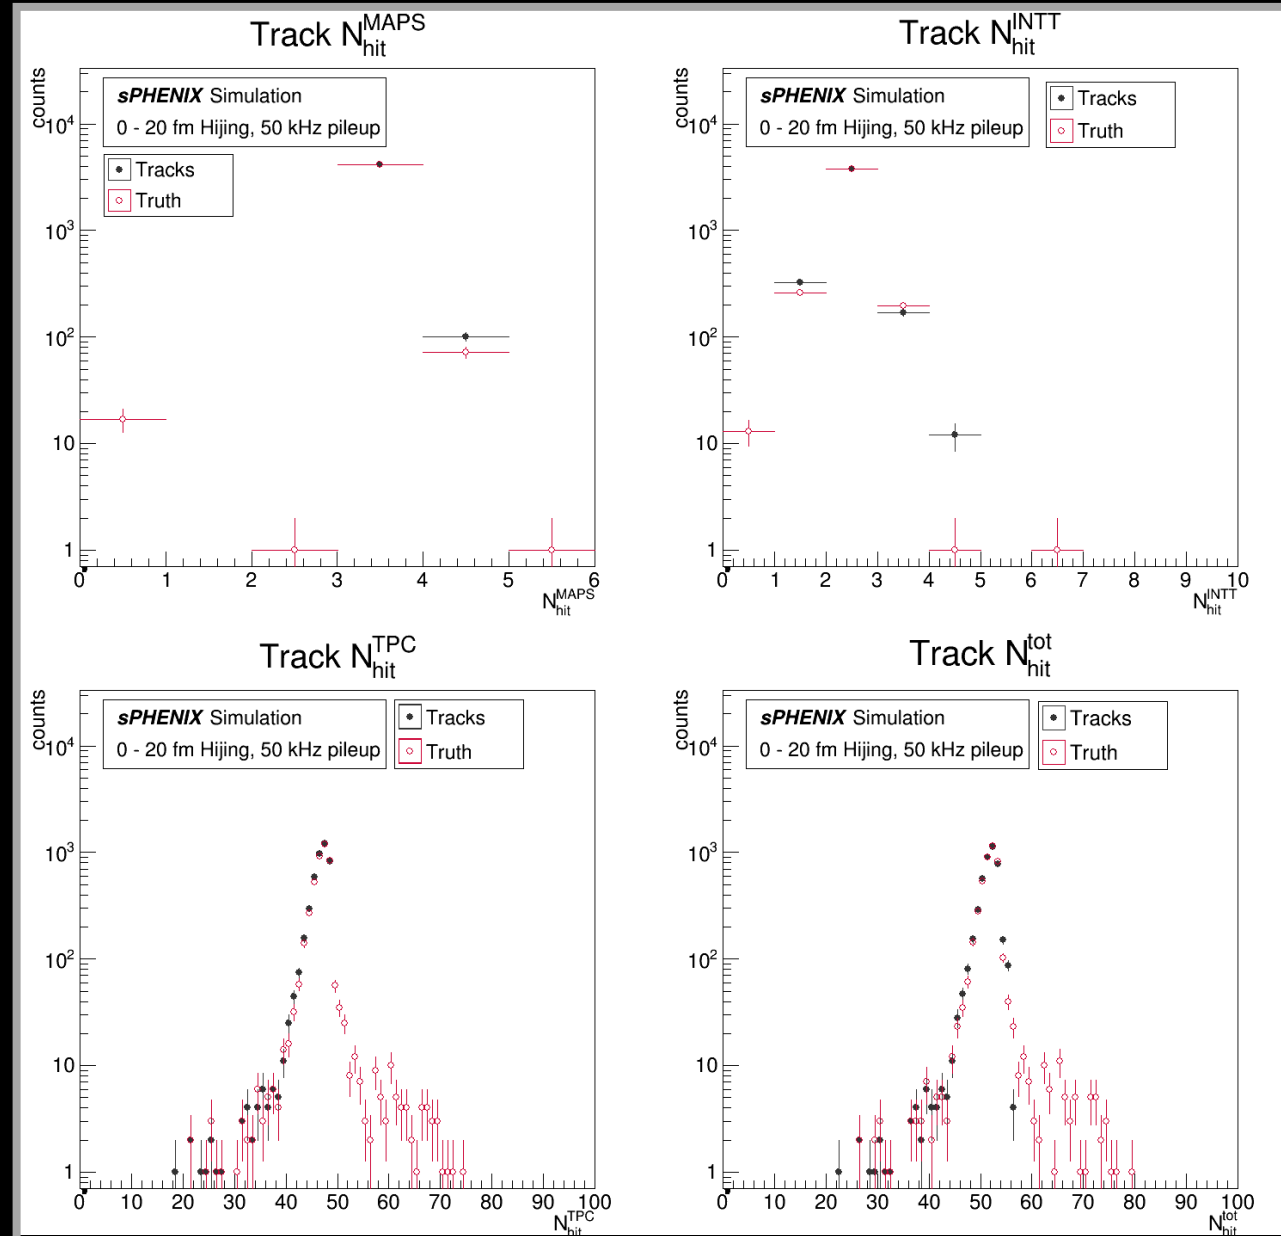

# Study Details

- Ran default Fun4All macro over small set of files to test:
  - 0 – 20 fm Hijing (**type = 4**)
  - 50 kHz pileup (**pileup = 1**)
  - ☞ Next will run over larger sample
- **These slides:** looked at a handful of quantities
  - ☞ This update is mostly to correct any conceptual errors...

# Track vs. True Pt

# Track vs. Truth Nhits

# Track/True Nhits

# Track Quality

## Track $\chi^2/\text{ndf}$

## Track $p_T$ vs. $\chi^2/\text{ndf}$

# Track DCA<sub>xy</sub>

# Track DCA<sub>z</sub>
