9.2 GeV collisions Run Overview

hours_perday_mb_hlt-effective.txt

- Average hours per day was 13 (Expected 14)
- HLTgood average event rate was 33 Hz (Expected 33-53)
- Final total for the dataset: 161.8 M (Goal: 160 M)
- Took 102 days to achieve goals (Expected 60-98)
- Major issues through the run were summer running conditions and time sharing with CEC

Global timing change: 21247014

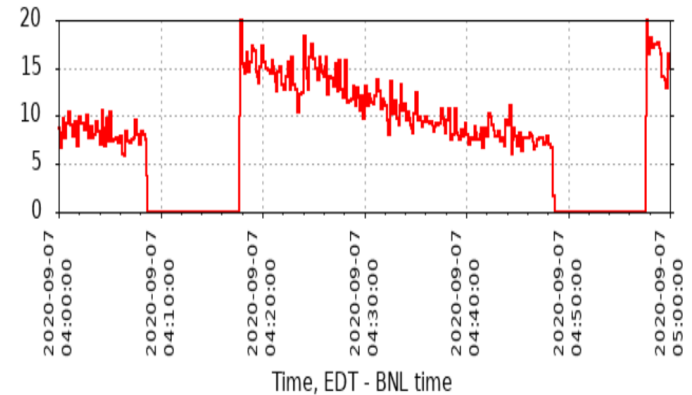

MCR shifted the vertex Z: 21247034-35

HLT good (70cm vtx) ———

Intensities reached 85E9;
 Almost twice that achieved in 2010 7.7 GeV run

Fill Length: 30 minutes (as expected)

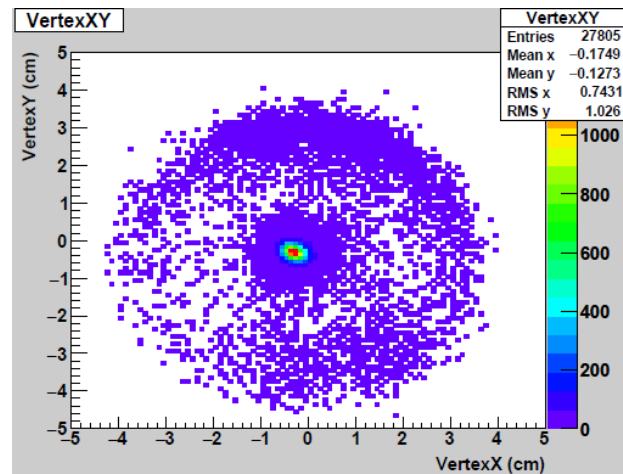

Average HLTgood rate: 16 Hz
 (want this to be 16-24 Hz)

Vertex Z look OK

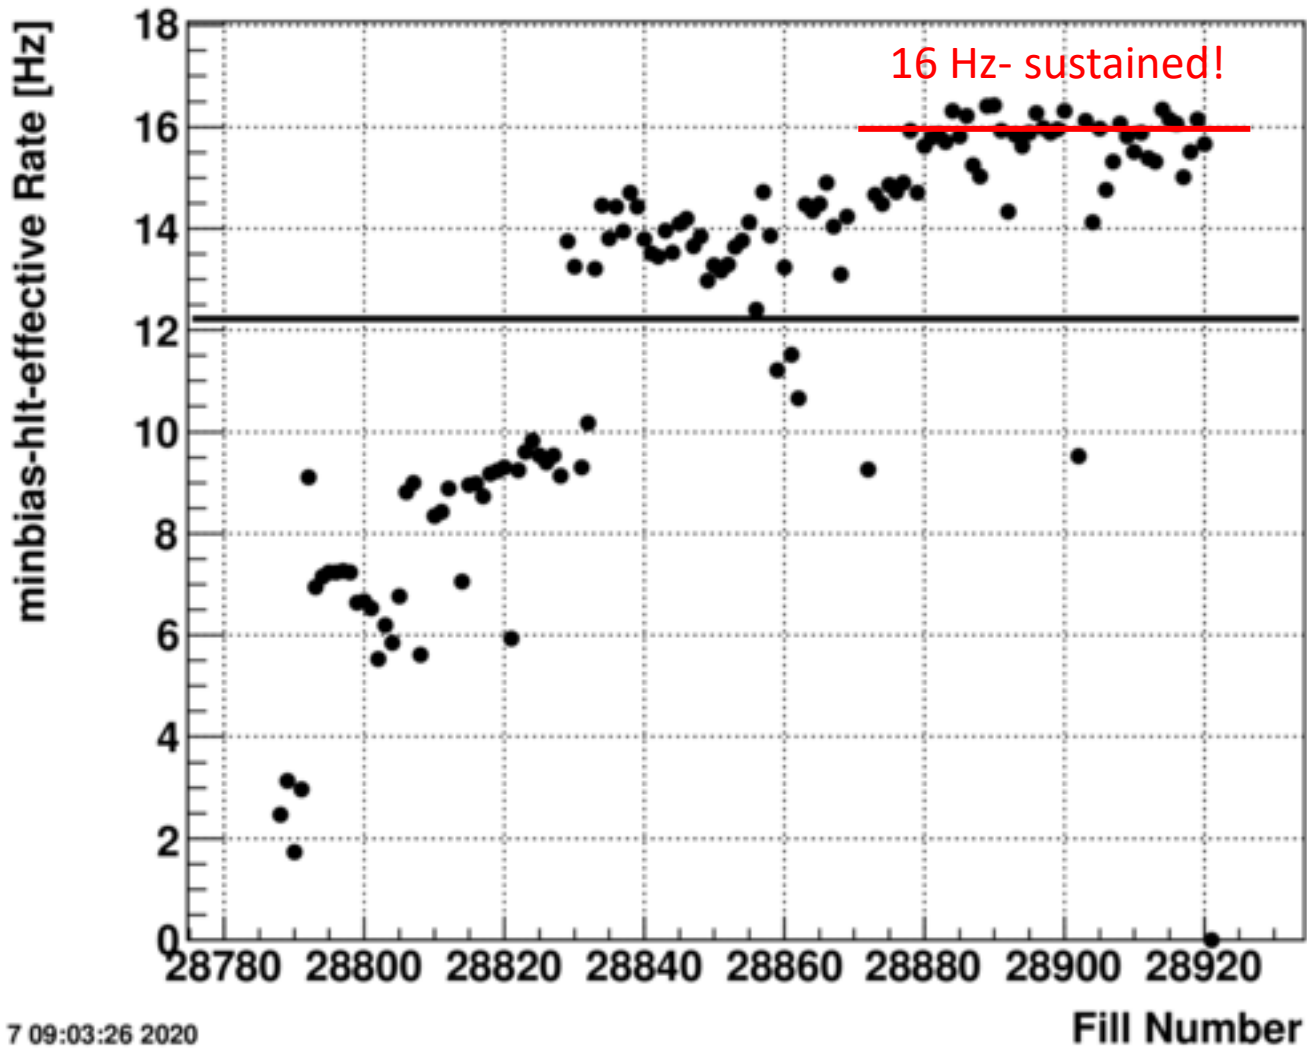

Vertex XY look clean

Exploring lower tunes

Fri Sep 11 11:03:15 2020

Summary

- 9.2 GeV completed at 8AM Tuesday September 1st.
- 7.7 GeV test run was completed Monday morning. We met the event rate and hours per day goals for this test run. Accumulated 2.94 M HLTgood events.
- Accumulated additional 93 M FXT event at 26.5 (7.2) GeV Monday and Tuesday. Total of 162 M to date.
- Tried lower tune for 7.7 GeV collisions on Thursday morning.
- Now back to CeC, hoping for more 26.5 GeV FXT over the weekend.
- Run ends Monday morning.
